OPUS 40-60-95 SINGLE & TWIN FANS

NEW STYLISH WALL & CEILING FAN CONTINUING NUAIRE'S  
PEDIGREE FOR HIGH PERFORMANCE, LOW NOISE SOLUTIONS.

## BENEFITS

### VERY QUIET OPERATION

Units offer high performance with low noise levels.

### MOST EFFICIENT SYSTEMS

Latest DC motor design providing high performance with the lowest possible Specific Fan Power available in its class. Will conform to Part L2.

### GUARANTEED VENTILATION

The most compact cost effective twinfan available for the duty range.

### QUICK & EASY TO INSTALL

Unit can be installed as recessed or surface mounted on site.

### SIMPLE TO COMMISSION

Integral control facility enables the duty to be precisely set without the need for additional controls.

### LOW MAINTENANCE COST

Easy clean foam filters protect motor and fan assembly, reducing maintenance costs and extending fan life. Foam filters fitted as standard.

### CONTROLS

A choice of 'on-board' and 'remote' control options are available, including Ecosmart energy efficient controls.

### FLEXIBLE SOLUTION - SIDE DISCHARGE

Unit can be installed horizontally or vertically. Range offers surface, recessed or duct mounted options.

### CONTINUOUS VENTILATION

Twin fans allow for automatic changeover to standby fan in event of fan failure.

### SPECIALIST OPTION

Vandal proof grille available for extra security and protection.

### WARRANTY

Opus 40, 60 & 95 have a 3 year warranty. Ecosmart models have a 5 year warranty.

Note: if you have a BMS system the Ecosmart model will be required.

For a full range of Ecosmart sensors and enablers please refer to the controls and ancillaries section.

## INSTALLATION OPTIONS

Unit can be installed as surface or recessed.

Recessed mounting mode.

PERFORMANCE - OPUS EXTRACT FANS

Opus 40, 60 and 95

## CONSULTANTS SPECIFICATION

### OPERATION

The extract fans shall be as indicated on the drawings and shall be in accordance with the fan schedule in the specification. The vitiated air shall be extracted from each area via ductwork as shown. All necessary ductwork fittings and ancillaries shall be allowed for by the mechanical sub contractor. The extract fan shall automatically vary its speed as it receives signals from one of the interconnected sensors sited in the rooms being ventilated. When the signal is received the fan shall have the ability to increase speed gradually until the required level is achieved or it will work on a trickle and boost principle i.e. increase ventilation rate from the continuous background rate to the design maximum in one step.

### FAN SPECIFICATION

The fans shall have low energy, high efficiency DC fan/motor assembly with sealed for life bearings.

Motors shall have locked rotor protection to prevent overheating in the event of fan failure. The case shall be 100% recyclable with all parts supplied to enable either surface or recessed mounting. It shall have noise levels and power requirements as detailed in the specification and in accordance with the manufacturers details.

The unit shall be capable of discharging the air either from the rear of the case or the side via spigots suitable for 100mm diameter ductwork.

For commissioning purposes the unit shall have a miniature control panel mounted in its fascia hidden behind the front cover facilitating high and low speed adjustment (trickle and boost) together with run on timer (1- 60minutes). The front cover shall be removable without the aid of tools. Any adjustments shall be quickly and easily achieved with a standard screwdriver. The control panel shall also have status indication lamps visible behind the corner "window".

Run and standby versions shall have autochangeover and duty share as standard, the fan shall changeover every twelve hours of run time to maximise the units effective life span. All models shall have foam filters as standard.

### CONTROL SPECIFICATION

The fan unit shall have the following functions integrally mounted within the fan unit on a purpose made PCB, all such components pre-wired and factory fitted by the manufacturer.

### CONTROL OPTIONS

All models to have power and fan failure indication visible behind the front cover.

Base model – on/off control with facility for continuous background ventilation.

C – full speed control of both background and boost ventilation.

R – 1-60 minute run-on timer.

P – Integrated passive infrared detection to trigger the units to boost (Ecosmart model).

### ES – ECOSMART CONTROL OFFERING:

- Integrated Infinitely variable speed control.
- Integral background ventilation commissioning facility.
- Integral boost ventilation commissioning facility.
- Autochangeover and duty share (twin fan unit only).
- Integral adjustable run on timer.
- Integral S/L terminal for boost trigger from remote switch, e.g. light switch.
- 3no. IDC sockets for interconnection of Ecosmart fans or low voltage sensors using pre-plugged 4-core low voltage cable.

Multiple fans can be interconnected and run from one or more sensor or controller.

- Remote volt free run and fail status indication.
- Run and fail relays for connection to BMS.
- Facia mounted fan failure, system status indication as follows:
  - Fan 1 status.
  - Fan 2 status.
  - Power to fan.
  - System standby.
- 5 years parts and labour warranty.

The unit shall be of the Opus type as manufactured by Nuaire.

### INSTALLATION

By the appointed contractor.

Mechanical installation requires mounting of the extract unit in the designated position and connection to the associated duct work. Electrical installation requires the provision and connection of single phase electrical supply at the fan.

The manufacturer's recommendations should be observed at all times.

ES-OPUSDC EXTRACT FANS

ENERGY EFFICIENT, LOW NOISE, FLEXIBLE EXTRACT SOLUTION.

## BENEFITS

### QUIETEST SOLUTIONS

Advanced fan motor and impeller technology providing the quietest unit available.

### CONTINUOUS VENTILATION

Twin fans allow for automatic changeover to stand by fan in the event of fan failure. They also feature auto duty share.

### MOST EFFICIENT SYSTEMS

Latest DC motor design providing high performance with the lowest possible Specific Fan Power available in its class.

### SIMPLE COMMISSIONING

Integrated speed control enabling minimum and maximum fan speed to be easily adjusted giving an accurate, efficient site set up.

### QUICK & EASY INSTALLATION

Unique self locating mounting bracket enables the unit to be quickly and efficiently installed without additional fittings.

### INCREASED LIFECYCLE

Accurate speed control reduces wear and heat losses combined with the automatic change over in the twinfan version increase overall life of the units.

### HEALTHY ATMOSPHERE

Ecosmart sensors accurately control the ventilation levels ensuring that the rooms design requirement is met without wasting motor power or needlessly extracting conditioned air. Trickle function means that a background ventilation rate can be accurately set to keep rooms fresh when there is low occupancy.

### CONTROLLABILITY

A choice of 'on-board' and 'remote' control options are available and are completely interchangeable.

### ECOSMART SPEED CONTROL

All units have inbuilt energy efficient Ecosmart control included as standard to provide an easily commissioned packaged solution.

### REMOTE FAILURE INDICATOR

Visual and audible failure indicator  
Code: ES-AVI2.

### WARRANTY

The Ecosmart Opusdc has a 5 year warranty.

## TYPICAL INSTALLATION

Easy control access.

Quick release bracket.

Plug-in connections.

3 inlet connections.

## CONSULTANTS SPECIFICATION

### OPERATION

The extract fans shall be as indicated on the drawings and shall be in accordance with the fan schedule in the specification. The vitiated air shall be extracted from each area via ductwork as shown. All necessary ductwork fittings and ancillaries shall be allowed for by the mechanical sub contractor. The extract fan shall automatically vary its speed as it receives signals from one of the interconnected sensors sited in the rooms being ventilated. When the signal is received the fan shall have the ability to increase speed gradually until the required level is achieved or it will work on a trickle and boost principle i.e. increase ventilation rate from the continuous background rate to the design maximum in one step.

### FAN SPECIFICATION

The fans shall have low energy, high efficiency DC fan/motor assembly with sealed for life bearings, mounted within an acoustically lined, 100% recyclable plastic case, ensuring a very efficient quiet solution. It shall have noise levels and power requirements as detailed in the specification and in accordance with the manufacturers details.

The unit shall incorporate a quick release mounting bracket. The bracket shall enable the unit to be mounted horizontally or vertically, enabling the unit to be removed without the aid of specialist tools. The depth of the unit shall not be greater than 190mm (including mounting bracket). The unit shall be constructed with one removable panel allowing quick and easy access to the electrical connections.

For commissioning purposes the unit shall have a miniature control panel mounted in its fascia facilitating high and low speed adjustment (trickle and boost) together with run on timer (1- 60minutes) and shall be accessible without the need of removing any access panels or the unit itself. Any adjustments shall be quickly and easily achieved with a standard screwdriver. The control panel shall also have status indication lamps on the underside of the unit.

Run and standby versions shall have autochangeover and duty share as standard, the fan shall changeover every twelve hours of run time to maximise the units effective life span.

Three number 100 diameter circular spigots on the system side of the unit are available to allow the ventilation of a number of rooms or points from a single unit. Two of the spigots have blanks fitted which are easily removed to facilitate the interconnection of ductwork.

### CONTROL SPECIFICATION

The fan unit shall have the following functions integrally mounted within the fan unit on a purpose made PCB, all such components pre-wired and factory fitted by the manufacturer: -

#### ES-OPUSDC

- Integrated Infinitely variable speed control.
- Integral background ventilation commissioning facility.
- Integral boost ventilation commissioning facility.
- Autochangeover and duty share (twin fan unit only).
- Integral adjustable run on timer.
- Integral S/L terminal for boost trigger from remote switch, e.g. light switch.
- 4no. IDC sockets for interconnection of Ecosmart fans or low voltage sensors using pre-plugged 4-core low voltage cable. Multiple fans can be interconnected and run from one or more sensor or controller.
- Remote volt free run and fail status indication.
- Facia mounted fan failure, system status indication as follows:
  - Fan 1 status.
  - Fan 2 status.
  - Power to fan.
  - System standby.
  - 5 year warranty.

Fan shall be the ES-Opusdc type unit as manufactured by Nuaire.

The user control and low voltage sensors are supplied complete with a 10m length of low voltage, pre-plugged cable to facilitate their interconnection (other length of cables available).

The manufacturer's recommendations should be observed at all times.

OPUS PLUS TWINFANS

COMPACT & POWERFUL, IDEAL FOR LARGER ROOM APPLICATIONS  
WHILST MAINTAINING LOW NOISE LEVELS.

## BENEFITS

### COMPACT & POWERFUL

Small design, high performance up to 150l/s - ideal for larger room applications.

### CONTINUOUS VENTILATION

Twin fans allow for automatic changeover to stand by fan in event of fan failure. They also feature auto duty share.

### VERY QUIET OPERATION

Acoustically treated case and 'on board' speed control offers high performance with low noise levels.

### SIMPLE COMMISSIONING

Integrated speed control enabling maximum fan speed is easily adjusted between 50% and 100%.

### INCREASED LIFECYCLE

Fans automatically change over to standby every 12 hours of run time, increasing units overall lifecycle. (Only twin fan models).

### LOW MAINTENANCE COST

Easy clean filters protect motor and fan assembly, reducing maintenance costs and extending fan life.

### HEALTHY ATMOSPHERE

Minimum fan speed can easily be adjusted between 0% and 50% for continuous background ventilation without wasting motor power. Enabling background ventilation to be provided without unnecessary controls.

### CONTROLLABILITY

A choice of 'on-board' and 'remote' control options are available.

### SPEED CONTROL INCLUDED

All units has speed control included as standard to provide a packaged solution.

### WARRANTY

Opus Plus have a 3 year warranty.

## ANCILLARIES

Humidistat.

Audio visual fault indicator.

Wall kit.

Remote P.I.R. sensor.

Thermostat.

Remote speed control.

### Easy maintenance.

### Simple controls.

Easy filter access.

WIRING

Wire for full speed operation only.

Wire for trickle vent/boost and timed overrun.

## CONSULTANTS SPECIFICATION

### OPERATION

The extract fans shall be as indicated on the drawings and shall be in accordance with the particular fan schedule in this specification. The vitiated air shall be extracted from each area via ductwork as shown. All necessary ductwork fittings and ancillaries shall be allowed for by the mechanical sub contractor.

The extract fans shall be operated as it receives signals from one of the interconnected sensors or an external signal e.g. light switch. The OPUS plus shall have the facility to increase speed on a trickle and boost principle when triggered.

### GENERAL FAN SPECIFICATION

The fans are acoustically lined with high density class "O" flame retardant acoustic insulation, giving extremely low noise levels and shall be complete with an integral filter (surface mounted versions only); integral controls, magnetic backdraught shutters and fascia mounted run and fail indication. The breakout noise level and power requirements shall be in accordance with the schedule and the manufacturer's details.

The fans shall have low energy, high efficiency fan/motor assembly with sealed for life bearings.

### OPUS PLUS

The unit shall be supplied complete with automatic fan changeover in the event of failure, sensed via a "hall effect" airflow sensor, and auto duty share every 12 hours of run time. (For twin fan only).

### DUCT MOUNTED

The unit shall incorporate a low profile single point mounting bracket, incorporating a pre-stressed synthetic anti vibration seal. The bracket shall enable the unit to be mounted horizontally or vertically. The depth of the unit shall not be greater than 260mm. The unit shall be constructed with one removable panel allowing full maintenance access. To facilitate the interconnection of branch ducts the unit shall have 4x100 dia & 1x 125 dia knockouts on the suction side of the unit (spigots provided).

Fan shall be the OPUS100- (2) M or the OPUS150-M as manufactured by Nuaire.

### SURFACE MOUNTED

All fan components are manufactured from ABS polymer and pre-coated steel. Unit finish shall be white.

Fan to have the option of an integrated PIR detector to switch the unit from trickle or off to full speed. Fans complete with integrated magnetic backdraught shutters. Air inlet grilles are fitted with foam filters to protect the fan/motor assembly from airborne dust and contaminants. The unit shall have a 125dia spigot to connect to ductwork or wall mounting kit. Surface mounted LED indicators shall show the unit operational status.

The unit shall be supplied complete with automatic fan changeover in the event of failure, sensed via a "hall effect" airflow sensor, and auto duty share every 12 hours of run time. (For twin fan only).

All versions shall have the following functions integrally mounted within the fan unit on a purpose made PCB, all such components pre-wired and factory fitted by the manufacturer:

- Integral adjustable background ventilation control/set point (0 – 50%).
- Integral adjustable trickle ventilation control/set point (50 – 100%).
- Integral adjustable run on timer.
- Integral S/L terminal for boost trigger from remote switch, e.g. light switch.
- Integral low voltage terminal for boost trigger from remote low voltage switch.
- Volt free failure/status indication.
- 3 years manufacturers warranty.

The unit shall be controlled by one of the following remote options:

- OPUS –SPD – Low voltage (12V) speed control, ON/OFF and speed control between min and max settings.
- 230-PIR - (passive infra-red) movement detector (includes run-on timer), 2-30 mins).
- 230-PIRNT - (passive infra-red) movement detector (without run-on timer).
- HUMISEN - Humidity sensor.
- 230-TSTATR – Room thermostat.
- CT- AVI – Remote failure indication.

Fan shall be the OPUS100- 2 B or M or the OPUS150- B or M as manufactured by Nuaire Ltd.

The manufacturer's recommendations should be observed at all times.

XS EXTRACT FANS

WIDE RANGE OF MULTIPURPOSE WALL, WINDOW AND ROOF  
EXTRACT FANS WITH OPTIONAL INTEGRATED CONTROLS.

## BENEFITS

### MARKET LEADING DESIGN

Wide range to suit most applications including wall, window, roof and ceiling (6, 9 & 12").

### QUIETEST OPERATION

Ultra quiet wax thermo actuator, together with market leading motor and impeller technology combine to produce one of the quietest wall fans available.

### 'MULTI' FAN SPEED CONTROL

Allows up to 5 fans to be connected to one speed control.

### HIGH PERFORMANCE

High efficiency impeller and external rotor motor out performs (up to 530l/s/ 1908m<sup>3</sup>/hr) its competitors at much lower noise levels (from 31dBA).

### FLEXIBLE SOLUTION

Reversible for extract and input with infinitely variable speed control.

### SAVE ENERGY & MONEY

Economy speed setting that will maximise performance at the lowest energy use.

### COMPLETE USER SAFETY

Robust construction, manufactured from flame retardant ABS polymer IP44 rated for long life.

### EASY REFURBISHMENT

XS refurb kits are quick to install and can be used to replace most existing systems.

### FLEXIBLE CONTROLS

A wide range of sensors including PIR, humidity, air quality, run on timer and thermostat can be integral within the unit or mounted separately.

### EASY TO SPECIFY AND ORDER

Fans are supplied complete with kit ensuring no missing components on-site.

### WARRANTY

XS has a 3 year warranty.

## TYPICAL INSTALLATION

### Exposed site window installation (use with Window Fan Kit)

### Exposed site wall installation (use with Wall Fan Kit)

### Flat roof (ducted to ceiling) installation (use with Ceiling Fan Kit)

### Pitched roof (ducted to ceiling) installation (use with Pitched Roof Fan Kit)

### In-Duct installation (use with Basic Fan Unit)

### Ceiling mounted fans for ducted applications

## XS (GL) WINDOW FAN KIT INSTALLATION

Remove front grille.  
Release screws, lift grille upward.

Prepare window.

Fix outer grille to spigot plate.  
Check plate orientation is vertical.  
Note grille locates over top lugs on spigot plate.

Remove adhesive pad covers.

Clean the window glass and affix the outer grille assembly over the window aperture.

Ensure rubber seal is located into case spigot. Feed cable into the case.

Screw the case/grille assembly together.

Release the electrical cover from the fan plate. Bring the cable through the fan plate.

Assemble the fan plate to the case. Fit the inside grille locating it over the top lip before engaging screws

For further information please refer to full installation and wiring diagram.

## XS (PR/FR) ROOF FAN KIT INSTALLATION

Drill through the dimples in the roof terminal. Position centrally & squarely over curb and fix using 6mm wood screws and sealing washers.

Fix the wall fixing plate centrally over the roof aperture. Locate the weather terminal centrally over the plate. Use the foam adhesive strip to fix.

Feed the supply cable through the spacer.

Offer up the spacer section to the terminal underside using 4.5mm screws provided.

Offer the spacer section up and fix through to the weather terminal fixing inserts.

Apply flashing from the tiles, over the fixing plate and overlap the base roof terminal by 25mm.

Release the electrical cover from the fan plate. For various wiring options.

Assemble the fan to the spacer section 4 set screws.

Fit the grille to the fan, locating top lip before fixing.

For further information please refer to full installation and wiring diagram.

Rear view

Side view

9" Fan XS9WA

Aperture required  
330 mm x 330 mm sq.

12" Fan XS12WA

Aperture required  
410 mm x 410 mm sq.

## XS (WA) WALL FAN KIT INSTALLATION

Remove front grille, release screws, lift grille. Remove fan.

Prepare the wall aperture to dimensions shown.

Cut the spacer to match the walls total thickness using a fine/med cut wood saw.

Fit temporary cross brace across wall sleeves outer end to support the side during installation.

Locate the temporary plug to support the end.

When fitting the sleeve, introduce a slight downward slope to the outside, this will allow any water to drain out.

Make good the wall sleeve. Remove the temporary cross brace when the cement is dry and fit the outer grille (note grille blocks sloping downwards to shed water).

Release the electrical case from the plate. Bring the cable through the fan plate.

Assemble the fan to the inner sleeve. Fit the inside grille to the fan plate locating grille over the top lip before engaging screws.

## XS (CL) CEILING FAN KIT INSTALLATION

Prepare aperture to suit  
the fan size.

Cut and fit timber supports  
(not supplied) for aperture  
as shown.

Offer the duct adaptor and two  
metal brackets into position.

1: Screw the 2 mounting  
rods into the brackets from  
below.  
2: Lock the screw rods with  
the nuts provided.

Fit metal brackets to the cross  
battens. Feed the the supply  
cable through the duct  
adaptor.

Offer the fan up into the  
duct adaptor and fix using  
the two screws.

Remove the electrical  
connection panel (top left).

Bring the cable through the  
fan late approx 150mm.

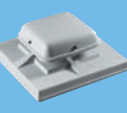

Fix the electrical connection before  
offering up the internal grille.  
Note grille clips over the top edge  
before fixing.

XS CONTROLS

MULTI-FAN CONTROL

**Fitting Remote Controller XS-MFC or Remote Sensors (optional)**  
The XS-MFC Multi Fan Control provides supply or extract, variable speed and automatic or manual switching of several fans if desired.  
The control is best mounted approx. 1.5m above the floor.  
Remote Sensors are available for Humidity, Air Quality and Passive Infra Red control.  
Remote Sensors should be positioned at least 1.5m above the floor and away from direct heat sources e.g. radiators.  
**NOTE:**  
Up to 5 fans (size 6"/9") can be controlled by one XS-MFC.  
Up to 3 fans (size 12") can be controlled by one XS-MFC.  
Do not mix different fans sizes on the same controller.

Description	Length	Depth	Height
Remote Control	155	87	60

**Speed Control;**  
with "Economy" (50%) setting, forward and reverse, on/off switches.  
**Typical code: XS-MFC**

## WIRING - XS

## Refurbishment Installation

This arrangement will give the following operating features:

- Adjustable speed
- Adjustable minimum speed
- Extract/intake
- Fan off - shutter open
- Fan off - shutter closed

Limitations are:

- Control of single fan only
- Integral sensors not possible
- Automatic ECO setting not available

This arrangement will give the following operating features:

- Single speed
- Extract/intake
- On/off

Limitations are:

- Control of single fan only
  - Integral sensors not possible
  - Automatic ECO setting not available
- Fans should be installed in line with the IEE wiring regulations.

## Fan Operated by On/Off Switch

Connect link wire between L2 & L4 for extract or  
Connect link wire between L2 & L3 for supply.

## Basic Fan Operated by Remote Sensor

Connect link wire between L2 & L4 for extract or  
Connect link wire between L2 & L3 for supply.

## Fan Operated by Integral Sensor

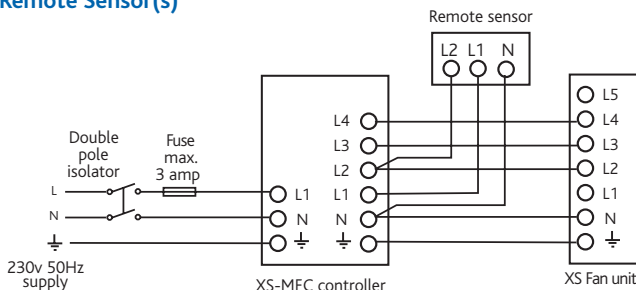

Connect link wire between L2 & L4 for extract or  
Connect link wire between L2 & L3 for supply.  
Connect switched live signal to L5 for integral timer module.

## Supply / Extract Fan Operated via Remote XS-MFC Control

Remote switch may be set: On / Off, Forward / Reverse, Economy / Std. (variable speed), Auto / Manual.

## Supply / Extract Fan operated via Remote XS-MFC Control &amp; Remote Sensor(s)

Remote switch may be set: On / Off, Forward / Reverse, Economy / Std. (variable speed), Auto / Manual.

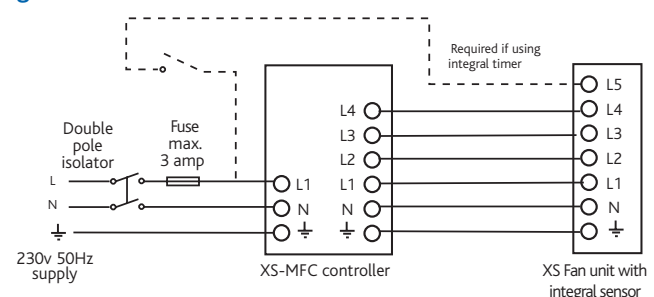

One or more Remote Sensors may be wired in parallel to one XS-MFC Control.  
Humidity Sensor: XS-HR, Air Quality Sensor: X S-AQR.

Passive Infra Red Sensor: XS-PIRR.

**Note: Multi-fan options:**

Up to 5 fans (size 6" / 9") can be controlled by one XS-MFC. Up to 3 fans (size 12") can be controlled by one XS-MFC. Do not mix different fan sizes on the same controller.

## Supply / Extract Fan Operated via Remote XS-MFC Control and Integral Sensor

Remote switch may be set: On / Off, Forward / Reverse, Economy / Std. (variable speed), Auto / Manual.

Maximum one Integral Sensor per fan 6/9/12 denotes unit size identity.  
Humidity Sensor: XS-H6/9/12, Air Quality Sensor: XS-AQ6/9/12.

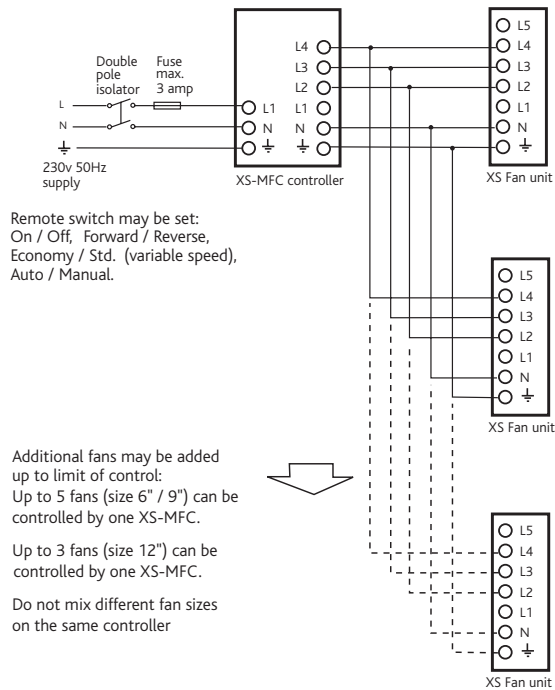

Passive Infra Red Sensor: XS-PIR6/9/12, Temperature Sensor: XS-TH6/9/12.

Run on Timer: XS-TA6/9/12.

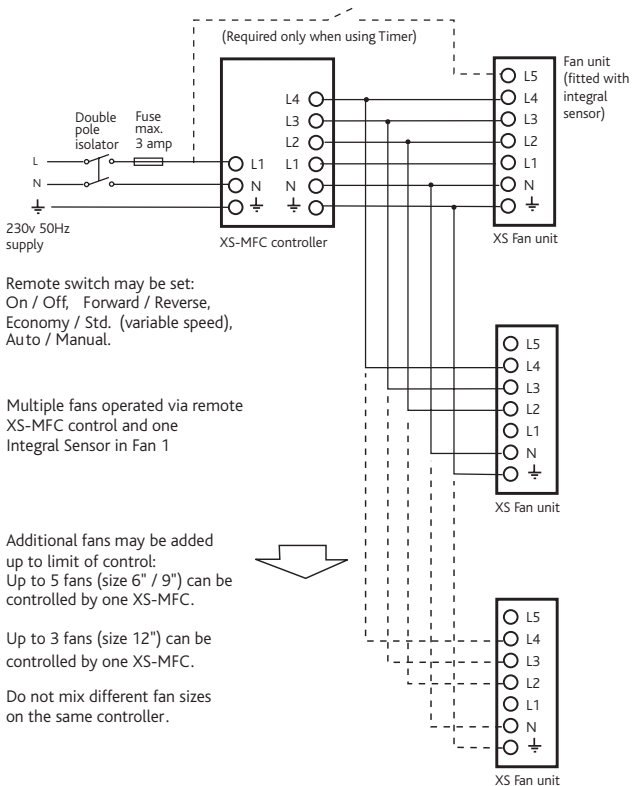

A single sensor will switch all fans if more than one fan is being operated by a single XS-MFC controller.

WIRING - MULTIPLE FANS

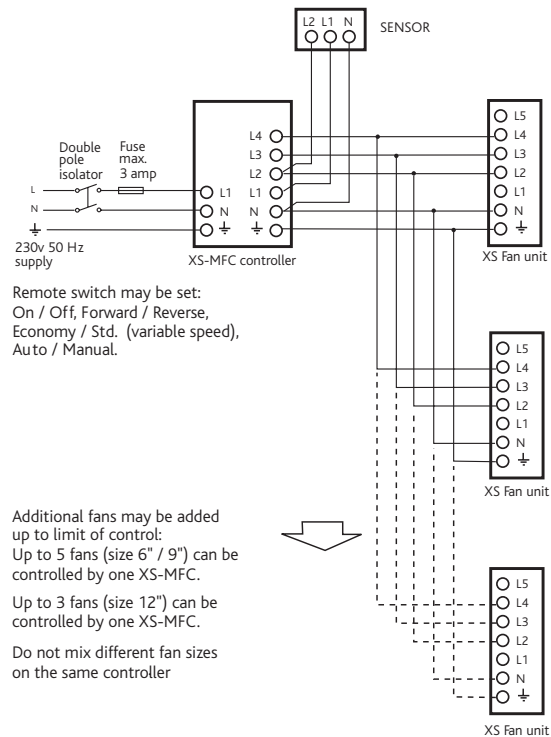

Multiple fans operated via remote XS-MFC control

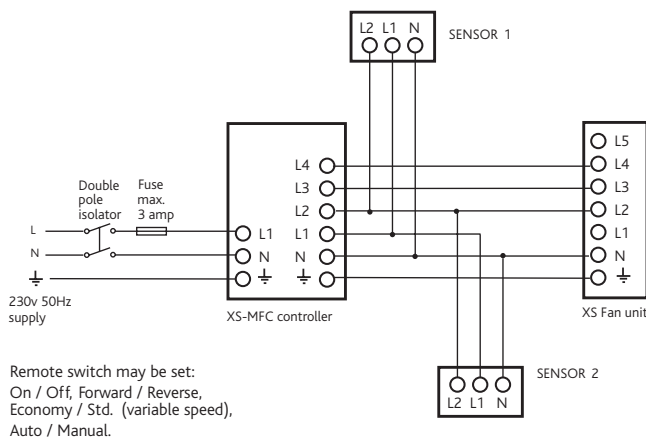

Multiple fans operated via remote XS-MFC control and one  
Integral Sensor in Fan 1

Multiple fans operated via remote XS-MFC control and a  
Remote Sensor

Fan operated using remote XS-MFC control and a Multiple  
Remote Sensor

## CONSULTANTS SPECIFICATION

### FAN DESCRIPTION

The extract fan/s shall be located in the positions indicated on the drawings and in accordance with the relevant fan schedule.

The fan shall be of the XS type and shall be supplied complete with integrated low loss radial backdraught shutter, silent operation via a thermo actuator, room side grille, connection kit and external louvre/roof cowl to suit the particular application.

The high efficiency, low noise axial flow impeller shall be directly driven by an external rotor motor featuring enclosure protection to IP 44, class B winding insulation and maintenance free ball bearings. All models shall be suitable for air over motor temperatures of up to 60°C and 95% R.H (non-condensing). The motor and impeller shall be dynamically balanced as an assembly.

Fan casing, impeller and shutter shall be manufactured from UV stabilised, flame retardant ABS polymer. All models shall include an economy/high efficiency setting facility and are dove grey in colour.

The fan shall be provided complete with integrated or remote controls as detailed in the schedule and as described below.

Where indicated the fans shall be interlinked and controlled from 1No. controller (up to 5 fans sizes 6 & 9, up to 3 fans size 12).

Fans shall be reversible via reversing switch on XS-MFC fan controller.

Fan to have a manufacturers 3 year warranty.

Fan to be of the XS type as manufactured by Nuaire Ltd.

### FAN CONTROL OPTION

The fan shall be provided with either integrated sensor to activate the fan or one of the remote options:

#### INTEGRATED CONTROL OPTIONS:

- PIR (passive infra-red) movement detector (includes run-on timer), 2-40 mins
- Humidity sensor (includes run-on timer), 30-90% RH - 2-40 mins RT
- Air quality sensor (includes run-on timer), 2-40 mins
- Run-on timer (all adjustable between 2-40 mins)
- Temperature sensor (includes run-on timer), 5-35°C (fixed 2mm overrun)

#### REMOTE CONTROL OPTIONS:

- PIR (passive infra-red) movement detector (includes run-on timer), 2-40 mins
- Humidity sensor (includes run-on timer), 30-90% RH - 2-40 mins RT
- Air quality sensor (includes run-on timer), 2-40 mins RT
- Anti-tamper security strap.
- XS-MFC controller incorporating economy switch, reversing switch and rotary speed control –

1No. XS-MFC controller may be used to control up to 5 fans.

Fan, integrated controls or associated sensors/controllers shall be as manufactured by Nuaire Ltd all with a 3 years warranty.

The manufacturer's recommendations should be observed at all times.

SQRBO SINGLE FANS

LOW DEPTH SOLUTION IDEAL FOR SPACE  
RESTRICTED APPLICATIONS.

## BENEFITS

### LOW PROFILE

Reduced case depth makes unit ideal for applications where space is limited.

### HIGH PERFORMANCE

Centrifugal impellers offer high performance combined with extremely low noise levels. Meeting all your requirements.

### QUIET SOLUTION

Fan/silencer combinations available to meet our design requirements.

### PEACE OF MIND

Squrbo fans are tested to comply with all relevant standards.

### UNIQUE 'QUICK' FIXING BRACKET

Reduces cost by saving time spent on site. Also incorporates an anti vibration seal - no additional AV mounts required.

### REMOVABLE FAN ASSEMBLY

Quick and easy to remove access panel for easy maintenance.

### 'PERFECT MATCH' CONTROLS & ANCILLARIES

Controls and ancillaries are available to suit exact requirements.

### FOR BUILT-IN CONTROLS PLEASE SEE ECOSMART SQRBO

### WARRANTY

Squrbo has a 3 year warranty.

## SQRBO ANCILLARIES

In-line Attenuator.

Filter Cassette.

Heat Exchanger.

Duct Heater.

Supply/Extract Cowl.

## CONTROLS

Auto Transformer.

							O	70	74	76	71	70	67	63	

The electrical and sound information in the table is nominal. Breakout dBA@3m is spherical, free field.  
(Start currents (sc) are DOL other than for motors of 4 kW and above which is star delta.) Applies to single phase motors.

\* Motor electrical supply, 1=1 phase (230V, 50Hz) 3=3phase (400V, 50Hz). I = Induct inlet. O = Induct outlet.

## CONSULTANTS SPECIFICATION

The ventilation fan Unit shall be configured and arranged as detailed on the drawings and in accordance with the schedule of equipment and shall be of the SQRBO type as manufactured by Nuaire. The units shall be manufactured heavy gauge Aluzinc corrosion resistant steel, acoustically lined with class 'O' flame retardant acoustic foam and fitted with rigid circular spigots. The general construction is to class A leakage.

The fan performance and noise levels shall be as detailed in the fan schedule and in accordance with the manufacturers details.

The fan impeller and motor shall be selected to provide the most energy efficient solution conforming to part L regulations and shall be backward curve, direct drive with high efficiency motors to BS5000 as standard, class B insulation and IP44 protection. It shall be capable of operating at an ambient temperature of up to 50 degrees C (40 degrees C with speed control). The unit shall incorporate an access panel for removal of fan module and for general maintenance.

For ease of installation the unit shall be provided with a single fixing mounting bracket with integrated anti vibration seals.

The unit shall be supplied, where indicated, with an integrated silencer to form a compact package, avoiding unnecessary sound breakout from fan/silencer connections.

The contractor shall allow for all necessary ductwork transformations to and from the fan unit and any associated components in accordance with the manufacturers recommendations, DW 144 and general good practice.

The Fan unit shall have a 3 year warranty.

The fan and ancillaries shall be of the SQRBO type as manufactured by Nuaire Limited.

All other components shall be in accordance with the manufacturer's specification.

SQRBO EXTRACT OR SUPPLY

LOW DEPTH EXTRACT OR SUPPLY FANS THAT AUTOMATICALLY  
REACT TO THE ENVIRONMENTAL CONDITIONS.

## BENEFITS

### ENERGY EFFICIENT

All models have Ecosmart controls which provide the most energy efficient and cost effective solution by varying fan speed to suit the required units.

### EXACT VENTILATION

Low voltage plug-in sensors allow the extract rate to be automatically adjusted to suit the rooms specific requirement. Plug-in sensors and controls reduce the installation time on site.

### COMPACT DESIGN

Low case height makes this unit ideal for restricted ceiling spaces. Unique, removable mounting bracket and integral AV mounts ensure quick and efficient installation and maintenance.

### QUIETER UNITS

Casing is fully lined to provide high acoustic and thermal insulation properties ensuring very low noise.

### COST EFFECTIVE

All sensors are safe extra low voltage therefore eliminating the need for expensive main wiring between fan and controls.

### EFFICIENT PACKAGED SOLUTION

All fans and controls are an integrated package providing a simple to select and install system – eliminating the need for traditional control panels.

### SIMPLE COMMISSIONING

On board control pad allows for pre-setting of minimum and maximum fan speeds to suit design requirements – no main balancing damper required.

### DESIGN FLEXIBILITY

Available in 6 case sizes, supply unit with LPHW or electric heater.

### ANCILLARIES

Full range of heat exchangers, attenuators, smart heaters and cowls etc. are available to complete your installation.

### WARRANTY

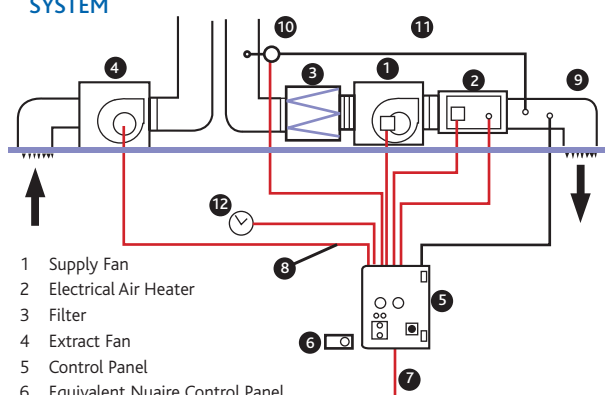

Ecosmart sqrubo has a 5 year warranty.

CONSULTANTS SPECIFICATION

EXTRACT UNIT SPECIFICATION

The Unit shall be configured and arranged as detailed on the drawings and in accordance with the schedule of equipment.

Unit shall be manufactured from acoustically lined, heavy gauge pre-galvanised, corrosion resistant steel. The units shall provide exceptional thermal and acoustic insertion. The general construction is to class A leakage.

The unit will be manufactured to provide a low height solution to enable it to be located in low depth ceiling and floor voids. For ease of installation the unit shall be provided with a single point mounting bracket with integrated, anti vibration strips.

The extract fan shall have complimentary controls which will enable it to interface directly with the supply unit via a low voltage pre-plugged cable. The fan impeller and motor shall be selected to provide the most energy efficient solution conforming to part L regulations and shall be direct drive with high efficiency motors to BS5000 as standard. The fan impeller shall be a high efficiency backward curved centrifugal design, manufactured in galvanised steel.

The contractor shall allow for all necessary ductwork transformations to and from the fan unit and any associated components in accordance with the manufacturers recommendations, DW 144 and general good practice.

The unit and ancillaries shall be of the Ecosmart Sqrubo type as manufactured by Nuaire Ltd.

All other components shall be in accordance with the manufacturer's specification.

CONTROL SPECIFICATION

The fan unit shall be supplied with one of the following control options:-

1. ECOSMART CONTROLS

The compact Ecosmart control system complete with all necessary controls to facilitate the operation of the ventilation system. It shall be come complete with an integral factory fitted Ecosmart PCB which will control the fan unit within the desired design parameters and provide the interface between all external control devices and the unit itself.

The Unit shall have the following energy saving components integrally mounted, pre-wired to interface with the purpose made PCB, all components pre-wired, configured and factory fitted by the manufacturer: -

- Integral Frequency inverter/speed controller.
- Integral maximum and minimum speed adjustment for commissioning.
- Integral adjustable run on timer.
- Integral BMS interfaces – heating/cooling switching, 0-10V speed adjustment. (using ES - CI).
- Volt free failure and status indication.
- Integral air off temperature adjustment.
- Facility for remote temperature control.
- Integral background ventilation switch (trickle switch).
- Multiple IDC sockets for interconnection of sensors or fans using pre-plugged 4-core low voltage cable.
- Volt free frost alarm/heat demand interface.
- Frost protection/hold off stat.

The Fan unit shall have a 5 year warranty.

## ECOSMART DUCT HEATER

Provided to boost the air temperature if the standard heating is not sufficient. Controlled directly from the Ecosmart Sqrubo controls. Duct Heaters are constructed from galvanised steel, and can be fitted in the horizontal or vertical position. Terminals are provided for electrical connection to heating elements which are centrally located in air stream.

All heaters are fitted with a high temperature safety cut out (rated 13 amps) with a manual re-set button located on the unit terminal box.

Typical code: ESH2

ANCILLARIES FOR ECOSMART SQRBO SUPPLY OR EXTRACT CONT.

FAST CLAMP DIMENSIONS (mm)

Manufactured from galvanised steel with a gasket liner to provide an air tight joint. Matching fan spigot diameters.

Typical code: FC-100

Dimensions (mm)

Code	A	D	Code	A	D
FC125	90	125	FC315	90	315
FC150	90	150	FC400	90	400
FC200	90	200	-	-	-
FC250	90	250	-	-	-

CIRCULAR FLEXIBLE CONNECTOR DIMENSIONS (mm)

Flexible material is flame resistant to BS476 part 7 with galvanised steel spigots. Heat resistant to 132°C with excellent resistance to chemicals, oil and grease. Connector is airtight and waterproof.

Typical code: CFC-10

Dimensions (mm)

Code	A	D	Code	A	D
CFC12	150	127	CFC31	150	317
CFC16	150	152	CFC40	150	402
CFC20	150	202	CFC50	150	502
CFC25	150	252	-	-	-

HEAT EXCHANGER DIMENSIONS (mm) & WEIGHTS

Manufactured from galvanised steel. The units provide a means of recovering heat from an extract system and transferring the heat to a complementary air supply system. Designed for horizontal mounting only, consisting of an insulated casing housing a plate heat exchanger. An internal drip tray and drain connection is provided. The access panel can be configured top or bottom. Filters must be fitted upstream on both sides to protect matrix.

Typical code: HX100

## ANCILLARIES FOR ECOSMART SQRBO SUPPLY OR EXTRACT CONT.

## WEATHERPROOF ENCLOSURE DIMENSIONS (mm)

Typical code: ESS2-EWP

Dimensions (mm)

Code	Spigot dia.	Weight Kg
ESS1-EWP	125	40.1
ESS2-EWP	150	42.5
ESS3-EWP	200	49.5
ESS4-EWP	250	51.4
ESS5-EWP	315	55.1

Suitable for electric heater version only.

Note: Above code is fan and weatherproof enclosure.

## TERMINATOR COWLS DIMENSIONS (mm) &amp; WEIGHTS

To provide a weatherproof route for supply &amp; exhaust air to your ducted system.

Cowls are manufactured from flame retardant polymer and can be supplied with gravity backdraught shutters, bird guards and hand guards. The terminal is finished in BS00A05 Grey as standard. All BS or RAL colours are available. The cowl will normally be fitted to the upstand by a roofing contractor or builder. The Cowl can be fitted without shutters on a 0-60 degree pitched roof with its longer side running down the roof slope. The Cowl can be fitted with its longer side running across a slope of less than 85 degrees from the horizontal. When fitted to a wall the longer side must run horizontal.

Typical code: TRTS-A Note: S = Shutters, BG = Bird Guard

Note: Air Pressure Drop of Attenuator (Pa) =  $Z \times Q^2$ where Z = Factor listed in table below Q = Air Volume Flow Rate ( $m^3/s$ )

Code	A	B	C	D	E	Weight Kg	Discharge	Z Intake
TRTS-A	900	620	340	460	600	12.3	67	118

TRTS-F	2260	1476	600	1200	1452	88.0	2.5	3.6

## SUPPLY/EXTRACT COWLS DIMENSIONS (mm) &amp; WEIGHTS

Supply/Extract Cowl: rigid flame retardant cowl, conforming with BS476 (Part 1 class 11) supplied in grey (BS 00 A 05) as standard (any BS or RAL colours available), fixing directly to the base using non-rusting sealed fixings. Air plenum is manufactured from galvanised steel incorporating supply & extract chambers. Rigid spigots are provided for connection of duct work. Supply & extract chamber is fitted with a bird guard.

Typical code: TRSE1

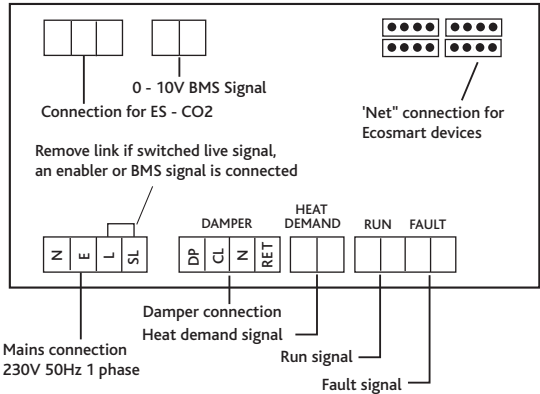

Code	A	B	C	D	E	F	G	Weight Kg
TRSE1	900	620	340	460	600	200	100	14
TRSE2	900	620	340	460	600	200	125	14
TRSE3	900	620	340	460	600	200	150	14
TRSE4	1320	964	475	700	945	345	200	30
TRSE5	1320	964	475	700	945	345	250	30
TRSE6	1320	964	475	700	945	345	315	30
TRSE7	1780	1170	485	900	1150	450	400	57

Resistance to airflow of this item is negligible.

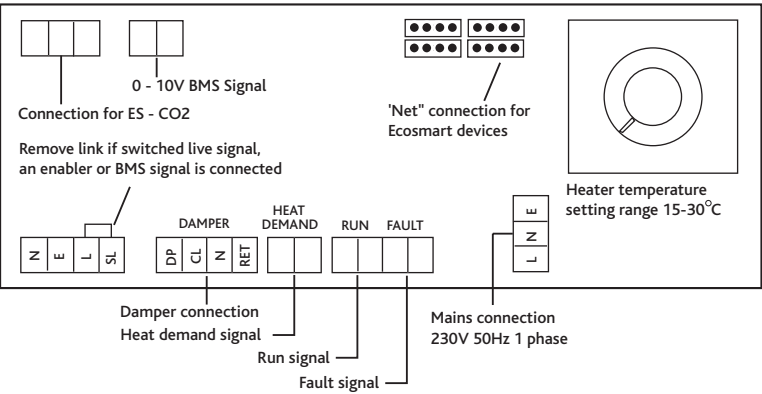

WIRING - ECOSMART SQRBO SUPPLY

ESS1-5 LPHW

ESS1-5E (Electric Coil)

ESS6-L (LPHW Coil)

Installing the water circuit

It is recommended that a strainer and isolating valves are fitted (by others) for ease of maintenance.

ESS6-E (12kW Electric Coil)

## CONSULTANTS SPECIFICATION

### MAKE UP AIR SUPPLY UNIT SPECIFICATION

The Unit shall be configured and arranged as detailed on the drawings and in accordance with the schedule of equipment. Unit shall be manufactured from acoustically lined, heavy gauge pre-galvanised, corrosion resistant steel. The units shall provide exceptional thermal and acoustic insertion. The general construction is to class A leakage.

The unit will be manufactured to provide a low height solution to enable it to be located in low depth ceiling and floor voids. For ease of installation the unit shall be provided with a single point mounting bracket with integrated, anti vibration strips.

The fan impeller and motor shall be selected to provide the most energy efficient solution conforming to part L regulations and shall be direct drive with high efficiency motors to BS5000 as standard. The fan impeller shall be a high efficiency backward curved centrifugal design, manufactured in galvanised steel.

The contractor shall allow for all necessary ductwork transformations to and from the fan unit and any associated components in accordance with the manufacturers recommendations, DW 144 and general good practice.

The unit and ancillaries shall be of the Ecosmart Sqrbo type as manufactured by Nuair Ltd.

All other components shall be in accordance with the manufacturer's specification.

### CONTROL SPECIFICATION

The fan unit shall be supplied with one of the following control options:-

#### ECOSMART CONTROLS

The compact Ecosmart control system complete with all necessary controls to facilitate the operation of the ventilation system. It shall be come complete with an integral factory fitted Ecosmart PCB which will control the fan unit within the desired design parameters and provide the interface between all external control devices and the unit itself.

The Unit shall have the following energy saving components integrally mounted, pre-wired to interface with the purpose made PCB, all components pre-wired, configured and factory fitted by the manufacturer: -

- Integral Frequency inverter/speed controller.
- Integral maximum and minimum speed adjustment for commissioning.
- Integral adjustable run on timer.
- Integral BMS interfaces – heating/cooling switching, 0-10V speed adjustment. (using ES - CI).
- Volt free failure and status indication.
- Integral air off temperature adjustment.
- Integral background ventilation switch (trickle switch).
- Multiple IDC sockets for interconnection of sensors or fans using pre-plugged 4-core low voltage cable.
- Volt free frost alarm/heat demand interface.
- Frost protection/hold off stat for LPHW units.

### COIL TYPES AND CONTROLS

- Low Pressure Hot Water.

The Low Pressure Hot Water heating coil shall be factory fitted with a 4-port valve, double regulating valve, drain cocks and air vents. The actuator controlling the 4-port valve shall be controlled via the on-board PCB by the off coil temperature sensor. All components pre-piped, assembled and tested by the manufacturers.

The control for the coils shall be fully integrated and shall maintain a constant off coil temperature. The system shall have frost protection which shall, at temperatures below 4 degrees C, fully open the 4-port valve and only start the fan when the temperature at the filter has risen above the designated set point. Unit shall have contacts which shall act as a frost alarm and/or signal boiler and circulating pumps to switch on.

### ELECTRIC HEATER BATTERY

The Electric Heater Battery shall be factory fitted and pre-wired to an integral closed loop thyristor control.

NOTE: Heaters will need an enable signal for heater (ES-LCD, 0-10V Bms or ES-CI).

The Fan unit shall have a 5 year warranty.

All equipment to be as manufactured by Nuair Ltd.

XTRACTOR SINGLE FANS

THE QUIETEST NOISE TO DUTY RATIO UNIT AVAILABLE.

## BENEFITS

### QUIETEST INSTALLATION

The high rigidity, double skinned construction produces the quietest noise to duty ratio unit in the industry, ensuring that your system requirements are easily met.

### LOW DEPTH 350MM (INTERNAL ONLY)

For applications where the space is at a premium, the ESXL version at only 350mm deep provides the perfect fit.

### PART L EFFICIENT

The fan impeller and motor are high efficiency IE2 motors to EN60034-30 with high efficiency forward or backward curved centrifugal impellers provide the most efficient solution. (Available on larger sizes, 11 and above).

### FLEXIBLE SOLUTION

Ideal for either internal or external applications. (See below for specific code).

### EASE OF ACCESS

Access panels provide quick and easy access for quick and easy maintenance – limiting maintenance costs.

### SAFETY TESTED

Motors are pre-wired to external IP55 rated terminal box for ease of installation.

### 'PERFECT MATCH' ATTENUATORS

Wide range of attenuators available to assist in meeting design criteria. Contact Nuaire for details.

### ECOSMART COMPATIBILITY

Units can be supplied with Ecosmart controls, providing a simple to install, easy to commission, energy efficient solution. Also facilitates the interconnection of a supply AHU.

### BMS & COMMISSIONING OPTION

Unit can be provided with integrated speed controls for commissioning purposes. This can be upgraded to a BMS option which gives these features plus BMS interfaces. Ecosmart has these features as standard.

### WARRANTY

Ecosmart Xtractor has a 5 year warranty.

### EXTRACTOR UNITS

ESX internal in-line fans.

ESX-X External in-line fans.

ESX-R Roof mounted fan with end inlet and side discharge.

ESX-B Roof mounted fan with bottom inlet and side discharge.

### 'FLOATING FAN' TECHNOLOGY

This is why the ESX is so quiet - Floating fan double skinned with direct coupled attenuators - patented by Nuaire.

## ANCILLARIES FOR XTRACTOR UNITS

### PREFABRICATED CURB DIMENSIONS (mm)

Manufactured in pre-galvanised steel these curbs will reduce design work and guarantee correct unit mounting when on site.

Note: Upper faces of curb are fitted with robust sealing strip.

Table 3. Prefabricated curb dimensions (mm).

Unit Code	Prefab Curb Code	A	B	C

ANCILLARIES FOR XTRACTOR UNITS

MATCHED SILENCER DIMENSIONS (mm)

Silencers have mineral wool packed to a density greater than 45kg/m<sup>3</sup>. The mineral wool is inert, non combustible and vermin proof for long life and safety. Case is manufactured from 'Solissime' coated galvanised steel, and designed for fixing directly to the fan outlet. Fan spigot used on open end of matched silencer.

SIL\*-DS

SIL2-LDS

Note: In order to benefit effectively from the low casing radiated noise levels that are a feature of this range, the system design must consider acoustic breakout from adjacent components, ducting etc.  
Nuair strongly recommends that its range of matched compact double skinned attenuators is used, directly coupled to the fan.

## ANCILLARIES FOR XTRACTOR UNITS CONT.

## FAST CLAMP DIMENSIONS (mm)

Manufactured from galvanised steel with a gasket liner to provide an air tight joint. Matching fan spigot diameters.

Typical code: FC-100

Code	A	D	Code	A	D
FC100	90	100	FC250	90	250

FC150	90	150	FC400	90	400
FC200	90	200	-	-	-

## CIRCULAR FLEXIBLE CONNECTOR DIMENSIONS (mm)

Flexible material is flame resistant to BS476 part 7 with galvanised steel spigots. Heat resistant to 132°C with excellent resistance to chemicals, oil and grease. Connector is airtight and waterproof.

Typical code: CFC-10

Code	A	D	Code	A	D
CFC10	150	102	CFC25	150	252
CFC12	150	127	CFC31	150	317
CFC16	150	152	CFC40	150	402
CFC20	150	202	-	-	-

## ANTI-VIBRATION MOUNTINGS DIMENSIONS (mm)

Supplied as a set of 4. To select/match isolated assembly weight to max supporting weight.

Typical code: NAV1 - Resilient Rubber

Code	Type	B	C	Max supporting weight Kg Per set of 4
NAV1	Rubber	30	50	20.0
NAV2	Rubber	40	75	80.0
NAV3	Rubber	40	75	180.0
NAV4	Rubber	40	75	260.0

Note: Belt driven fans have built-in AV's.

ANCILLARIES FOR XTRACTOR UNITS CONT.

TERMINATOR COWLS DIMENSIONS (mm)

To provide a weatherproof route for supply & exhaust air to your ducted system.

Cowls are manufactured from flame retardant polymer and can be supplied with gravity backdraught shutters, bird guards and hand guards. The terminal is finished in BS00A05 Grey as standard. All BS or RAL colours are available. The cowl will normally be fitted to the upstand by a roofing contractor or builder. The Cowl can be fitted without shutters on a 0-60 degree pitched roof with its longer side running down the roof slope. The Cowl can be fitted with its longer side running across a slope of less than 85 degrees from the horizontal. When fitted to a wall the longer side must run horizontal.

Typical code: TRTS-A      Note: S = Shutters

Note: Air Pressure Drop of Attenuator (Pa) = Z x Q<sup>2</sup>  
where Z = Factor listed in table below    Q = Air Volume Flow Rate (m<sup>3</sup>/s)

Code	A	B	C	D	E	Weight Kg	Discharge	Z Intake
TRTS-A	900	620	340	460	600	12.3	67	118

TRTS-F	2260	1476	600	1200	1452	88.0	2.5	3.6

SUPPLY/EXTRACT COWLS DIMENSIONS (mm)

Supply/Extract Cowl: rigid flame retardant cowl, conforming with BS476 (Part 1 class 11) supplied in grey (BS 00 A 05) as standard (any BS or RAL colours available), fixing directly to the base using non-rusting sealed fixings. Air plenum is manufactured from galvanised steel incorporating supply & extract chambers. Rigid spigots are provided for connection of duct work. Supply & extract chamber is fitted with a bird guard.

Typical code: TRSE1

Code	A	B	C	D	E	F	G	Weight Kg
TRSE1	900	620	340	460	600	200	100	14
TRSE2	900	620	340	460	600	200	125	14
TRSE3	900	620	340	460	600	200	150	14
TRSE4	1320	964	475	700	945	345	200	30
TRSE5	1320	964	475	700	945	345	250	30
TRSE6	1320	964	475	700	945	345	315	30
TRSE7	1780	1170	489	900	1150	450	400	57

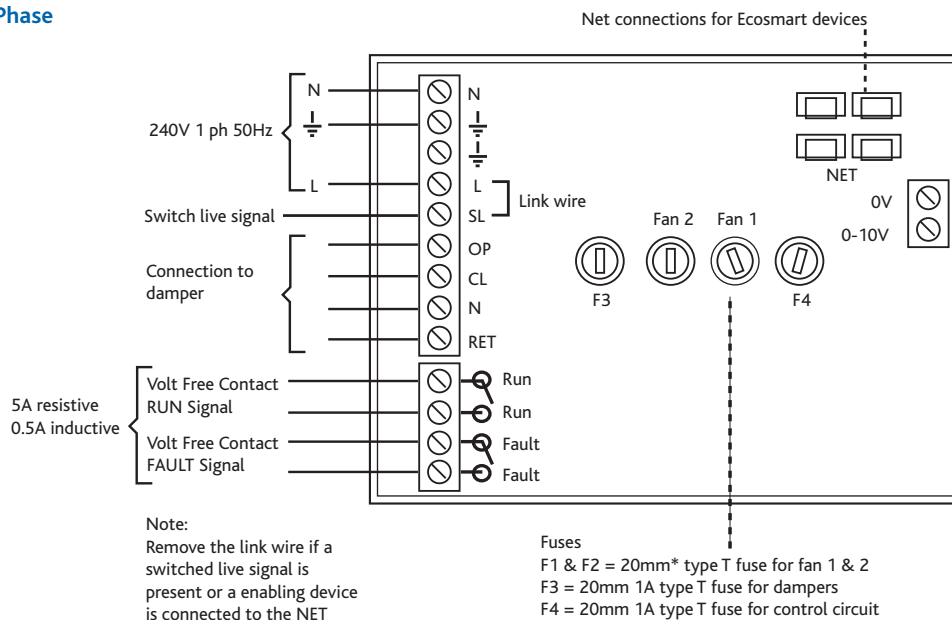

Resistance to airflow of this item is negligible.

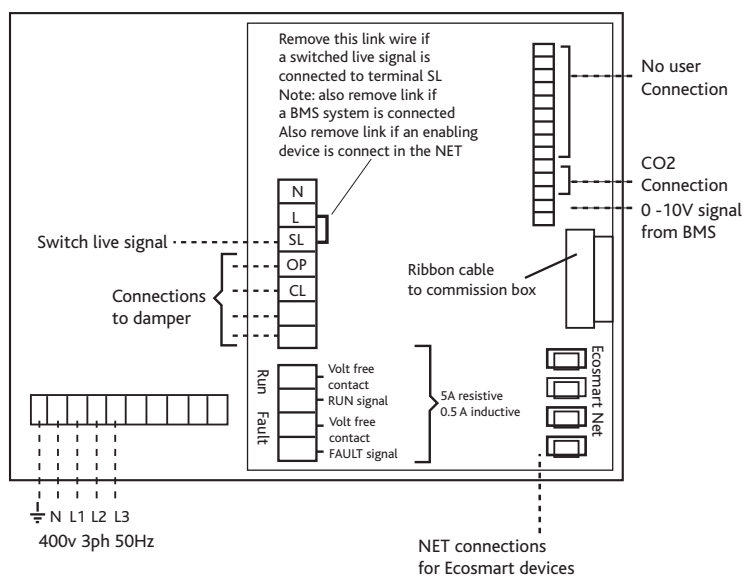

## WIRING - XTRACTOR

### Single Phase

### Three Phase

### Set Up/Commissioning box

## CONSULTANTS SPECIFICATION

### INTERNALLY MOUNTED XTRACTOR UNIT

The ventilation fan unit shall be configured and arranged as detailed on the drawings and in accordance with the schedule of equipment. It shall be of the Xtractor type as manufactured by Nuaire.

The unit sizes 1 to 4 inc. shall be provided in heavy gauge galvanised steel double skin casework. Double skin infill shall be of V0 grade acoustic foam and inner case shell. The units shall be of a low depth configuration to enable location in shallow ceiling and floor voids, maximum depth of unit 350mm.

Unit sizes 5 to 13 inc. shall be constructed using the Nuaire floating box format and shall incorporate heavy gauge galvanised steel double skin casework. Double skin infill shall be of V0 grade acoustic foam and inner case shall mechanically isolated from the outer case. General construction shall achieve class A leakage rates. The fan enclosure shall feature V0 internal acoustic foam lining.

The stated casing breakout sound levels shall not be exceeded.

Unit sizes 15 to 27 inc shall be manufactured from a highly rigid pentapost framework with 25mm double skinned infill panels. The panels shall contain inert high density infill. Panel materials are heavy gauge Aluzinc corrosion resistant steel.

The fan/motor assembly shall be in a self contained insulated enclosure which shall be acoustically isolated from external skin providing exceptional acoustic breakout characteristics. The very low breakout noise level through the unit casing must not be exceeded. The general construction is to class A leakage.

### EXTERNALLY MOUNTED XTRACTOR UNIT

The unit shall be manufactured from heavy gauge, corrosion resistant Aluzinc steel, internally coated with fire retardant acoustic material. Fully detachable panels for maintenance/service and manometer test points. It shall have an integrated upstream attenuator keeping system noise levels to an absolute minimum.

The fan/motor assembly shall be in a self contained insulated enclosure which shall be acoustically isolated from external skin providing exceptional acoustic breakout characteristics. The very low breakout noise level through the unit casing must not be exceeded. The general construction is to class A leakage.

### GENERAL SPECIFICATION

Fan assemblies to incorporate fan impeller and motors selected to provide the most energy efficient solution conforming to part L regulations. The fan impeller shall be a high efficiency forward or backward curved centrifugal design and shall be direct or belt drive with IF2 high efficiency motors to EN60034-30 as standard, belt or direct drive with motors fitted with "hall effect" air flow failure monitoring. All units suitable for operation in ambient temperatures of 40 degrees C.

The contractor shall allow for all necessary ductwork transformations to and from the fan unit and any associated components, the contractor shall also ensure that all necessary builders work and weathering is provided in accordance with the manufacturer's recommendations, DW 144 and general good practice.

The mechanical contractor shall ensure that all necessary ancillaries are included e.g. AV mounts, flexible connections, attenuators, etc and shall be in accordance with the manufacturer's specification and recommendations.

### CONTROL SPECIFICATION

The fan unit shall be supplied with one of the following control options:-

#### 1. ECOSMART CONTROLS

The compact Ecosmart control system complete with all necessary controls to facilitate the operation of the ventilation system. It shall be come complete with an integral factory fitted Ecosmart PCB which will control the fan unit within the desired design parameters and provide the interface between all external control devices and the unit itself.

The fan unit shall have the following energy saving components integrally mounted, pre-wired to interface with the purpose made PCB, all components pre-wired, configured and factory fitted by the manufacturer: -

- Integral Frequency inverter/speed controller.
- Integral maximum and minimum speed adjustment for commissioning.
- Integral adjustable run on timer.
- Integral BMS interfaces – 0-10V speed adjustment.
- Integral BMS interfaces – Volt free failure and status indication.
- Integral background ventilation switch (trickle switch).
- Multiple IDC sockets for interconnection of sensors or fans using pre plugged 4-core low voltage cable.

The Ecosmart controls will enable the unit to automatically vary its speed as it receives signals from one of the interconnected sensors. When the signal is received the fan shall either increase speed gradually until the required level is achieved or it will work on a trickle and boost principle. This will then move the fan duty point from trickle/background ventilation rate to the required boost ventilation rate. Both the trickle and boost rates are infinitely variable, easy to adjust and remove the need of a main balancing damper.

## CONSULTANTS SPECIFICATION

### 2. BMS INTERFACES

The fan unit shall be provided with the following integrated BMS interfaces:

- 0 - 10 volt contacts to provide a full BMS interface. This will enable the following functions:-

Switch the unit on/off.

Switch from low speed to high speed.

Full speed control facility.

- 2 No. volt free contacts to provide fan run and failure indication to provide system status.
- An integrated commissioning/speed control to accurately commission the system, with minimum and maximum speeds easily adjusted via a miniature dial, as recommended in Part L. This will enable the unit to be configured to run between set parameters thus saving motor power and limiting noise.

### 3. COMMISSIONING SET UP

The fan unit shall be provided with an integrated commissioning/speed control to accurately commission the system, as recommended in Part L, minimum and maximum speeds easily adjusted via miniature dial.

Ecosmart Xtractor shall have a 5 year warranty.

The unit is to be of the Xtractor Type as manufactured by Nuaire Ltd.

## CONSTANT PRESSURE SINGLE FANS

ENERGY SAVING CENTRAL EXTRACT SYSTEM THAT PRECISELY  
VENTILATES INDIVIDUAL ROOMS DEPENDING ON  
THEIR REQUIREMENTS.

## BENEFITS

### QUIETEST SYSTEMS

Nuaire's unique integrated silencer means that your systems acoustic requirements both induct (suction side) and breakout are maintained whilst saving space on site.

### QUIET OPERATION

Does not generate noise by throttling back on balancing dampers required in conventional systems.

### TRUE DEMAND VENTILATION

Only the areas requiring ventilation receive ventilation.

### SAVES ENERGY

Up to 70% saving over conventionally controlled central systems.

- Not needlessly extracting conditioned air
- Fan speed/motor power dictated by demand requirement.

### UNIQUE DIRECT ACTING MULTI-POSITION DAMPER/GRILLE

Ensures operation only when room occupied with integrated PIR.

### PRE-WIRED

All components assembled, wired and tested at the Nuaire manufacturing facility.  
- Simply plug and go.

### ENHANCED CAPITAL ALLOWANCE COMPLIANT

Immediate benefits to your client.

### INTEGRATED SILENCER

Sizes 6 and 9.

### DUCT MOUNTED VERSION OF DAMPER

For unobtrusive flexibility.

### TWIN OR SINGLE

Twin or single fan options are available.

### WARRANTY

Ecosmart Constant Pressure fans have a 5 year warranty.

Note: For further details on Constant Pressure single fan options, please contact Nuaire.

Note: These units have the pressure sensor configured for extract application. For supply applications please contact Nuaire.

### WHAT IS CONSTANT PRESSURE?

Constant Pressure Variable Volume systems (CPVV) are systems of fans, controls & sensors installed in a ducted system. The system is intended to provide continuous background ventilation when the served space is unoccupied and will automatically increase the ventilation rate when occupied to the design requirement.

PERFORMANCE - CVD DAMPER

A nominal pressure drop must be allowed in order to ensure adequate airflow through the damper.

To ensure the airflow pattern through the damper produces consistent readings; the pressure drop across the damper should not exceed the recommended value.

Recommended values are listed in the table below and shown in the performance envelope of each damper.

Code	Nominal design pressure	Maximum across damper*
CVD100	60Pa	120Pa
CVD125	70Pa	140Pa
CVD150	80Pa	160Pa
CVD200	90Pa**	200Pa

\*Recommended maximum operating pressure to ensure the damper would work within calibration limits.

Keep the duct velocity as low as possible to ensure the system produces the lowest energy usage, preferably below 5m/s.

\*\*Allow 90Pa for duties below 100l/s and 150Pa for duties between 100l/s and 125l/s.

Please refer to our commissionary guide 671405 for more detail regarding constant pressure systems.

## CONSULTANTS SPECIFICATION

### CONSTANT PRESSURE EXTRACT SYSTEM

The main extract fan shall be as indicated on the drawings and in accordance with the relevant fan schedule. The vitiated air shall be extracted from the space using an energy efficient constant pressure principle via a variable air volume motorised damper/grille installed in each area, as detailed in the schedule.

### OPERATION

The extract fan shall automatically vary its speed as the system pressure varies; the variation in pressure is caused by the opening and closing of the Nuair CVD extract damper. The damper is autonomous of the fan and requires no field wiring connecting it to the fan. The damper positions are open (boost) and closed (trickle). When the damper is closed, the grille will allow approx. 8 litres/sec flow rate, as background ventilation. The inline damper has an integrated airflow sensor which continuously monitors and controls the amount of air being moved. The air volume is adjusted via minimum and maximum potentiometers on the side of the CVD damper.

The duct mounted damper CVD requires a 230V connection/power supply. Signal from 230V switch live i.e. light switch, PIR, humidistat etc.

(If the NRG grille is installed it shall be connected to a 12V ac supply via the inclusive 230V transformer unit and has an integral PIR, two position damper and overrun timer).

Once commissioned and set to work, the fan will maintain the preset pressure by varying its speed as the ventilation requirement within each area varies i.e. as dampers open and close. If the requirement exceeds the maximum or minimum limit, the fan will remain at the design/ limiting speed.

### FAN SPECIFICATION

Each acoustically lined low noise Single fan shall be fitted with an integral Ecosmart control inclusive of pressure transducer and inverter drive. The fans shall have the following energy saving and operational functions integrally installed within the fan unit, all components will be pre-wired and fitted by the manufacturer: -

- Integral operating pressure adjustment (target pressure).
- BMS interface 0 - 10V.
- Volt free run & failure/status indication.
- 4no. low voltage sockets for interconnection of remote failure indicator.

Fan, integrated Ecosmart controls and associated sensors/controllers shall be manufactured by Nuair Ltd.

### CVD FEATURES

- Optional trickle/boost flow rate.
- Externally adjusted settings.
- CVD helps balance system.
- MEMS provide precise measurements and control of flow rate.

Ecosmart Xtractor shall have a 5 year warranty.

### INSTALLATION

Mechanical installation requires mounting of the extract unit in the designated position and connection to the associated duct work.

The installer shall allow for all necessary ductwork transformations to and from the fan unit and any associated components in accordance with the manufacturers recommendations, DW 144 and general good practice.

Electrical installation requires the provision and connection of single phase electrical supply sizes 6 & 9 or three phase sizes 11 to 19 inclusive.

A volt free run/fail status indication at the fan.

A single phase supply to the duct mounted damper version CVD/NRG.

A single phase supply to the transformer feeding the grille with integrated damper and PIR, the 12V output of which is connected to the grille.

### COMMISSIONING

By the appointed commissioning engineer.

The systems should be commissioned in the normal way and the operating or target pressure (inlet side of unit only) set via a potentiometer in the integral set-up box within the fan unit. This should be adjusted until the required air volume flow rate is achieved on the approved measuring device.

The manufacturer's recommendations must be observed at all times.

NOTE: NRG & CVD should not be mixed on the same system.

AIR MOVER SINGLE FANS

LOW NOISE FAN FOR HIGH PERFORMANCE APPLICATIONS.

## BENEFITS

### QUIETEST INSTALLATION

The high rigidity, double skinned construction produces the quietest noise to duty ratio unit in the industry, ensuring that your system requirements are easily met.

### IDEAL FOR DUCTING

Units are constructed with a square case and mezz flange to suit ducted applications.

### ROBUST PROTECTION

Strong aluzinc and pentapost construction provides long life and helps minimise onsite installation damage.

### FLEXIBLE SOLUTION

Ideal for either internal or external applications.

### EASE OF ACCESS

A panel provides quick and easy access reducing maintenance costs.

### CONTROL-ABILITY AS STANDARD

All models have the flexibility to be speed controlled utilising a Nuaire Ecosmart control.

### FAN TO SUIT ALL APPLICATIONS

2-speed options available. Class 'H' insulated motors are available. Contact Nuaire for details.

### SAFETY TESTED

Motors are pre-wired to external IP55 rated terminal box for ease of installation.

### 'PERFECT MATCH' ATTENUATORS

Wide range of attenuators available to assist in meeting design criteria.

### ECOSMART COMPATIBILITY

Units can be supplied with Ecosmart controls, providing a simple to install, easy to commission, energy efficient solution. Also facilitates the interconnection of a supply AHU.

### WARRANTY

Airmover has a 3 year warranty.  
Ecosmart Airmover has a 5 year warranty.

## SQUIF ANCILLARIES

Splitter Attenuator.

AV Mounts.

Flexible Connector.

Weatherproof Cowl.

Guard for square units.

## ANCILLARIES FOR AIRMOVER UNITS CONT.

## TERMINATOR COWLS DIMENSIONS (mm)

To provide a weatherproof route for supply & exhaust air to your ducted system.

Cowls are manufactured from flame retardant polymer and can be supplied with gravity backdraught shutters, bird guards and hand guards. The terminal is finished in BS00A05 Grey as standard. All BS or RAL colours are available. The cowl will normally be fitted to the upstand by a roofing contractor or builder. The Cowl can be fitted without shutters on a 0-60 degree pitched roof with its longer side running down the roof slope. The Cowl can be fitted with its longer side running across a slope of less than 85 degrees from the horizontal. When fitted to a wall the longer side must run horizontal.

**Typical code: TRTS-A** Note: S = Shutters

Note: Air Pressure Drop of Attenuator (Pa) =  $Z \times Q^2$

where Z = Factor listed in table below Q = Air Volume Flow Rate (m<sup>3</sup>/s)

Code	A	B	C	D	E	Weight Kg	Discharge	Z Intake
TRTS-A	900	620	340	460	600	12.3	67	118
TRTS-B	1080	740	375	560	695	14.7	39	87

TRTS-E	1780	1170	485	900	1136	50.0	7	11.3
TRTS-F	2260	1476	600	1200	1452	88.0	2.5	3.6

## SUPPLY/EXTRACT COWLS DIMENSIONS (mm)

Supply/Extract Cowl: rigid flame retardant cowl, conforming with BS476 (Part 1 class 11) supplied in grey (BS 00 A 05) as standard (any BS or RAL colours available), fixing directly to the base using non-rusting sealed fixings. Air plenum is manufactured from galvanised steel incorporating supply & extract chambers. Rigid spigots are provided for connection of duct work. Supply & extract chamber is fitted with a bird guard.

**Typical code: TRSE1**

Code	A	B	C	D	E	F	G	Weight Kg
TRSE1	900	620	340	460	600	200	100	14
TRSE2	900	620	340	460	600	200	125	14
TRSE3	900	620	340	460	600	200	150	14
TRSE4	1320	964	475	700	945	345	200	30
TRSE5	1320	964	475	700	945	345	250	30
TRSE6	1320	964	475	700	945	345	315	30
TRSE7	1780	1170	489	900	1150	450	400	57

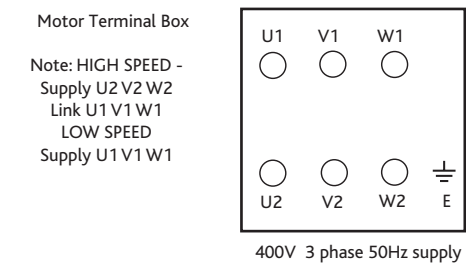

Resistance to airflow of this item is negligible.

WIRING - AIRMOVER

Two speed motors DOL starting on both speeds

Observe the motor plate and connection details.  
3 phase two speed tap/pam wound motors require a three contactor control.  
3 phase Dual wound motors require a two contactor control.

3 phase units up to 3KW

3 phase motors are connected directly to the Motor Terminal Box.

3 phase units with matched frequency inverter

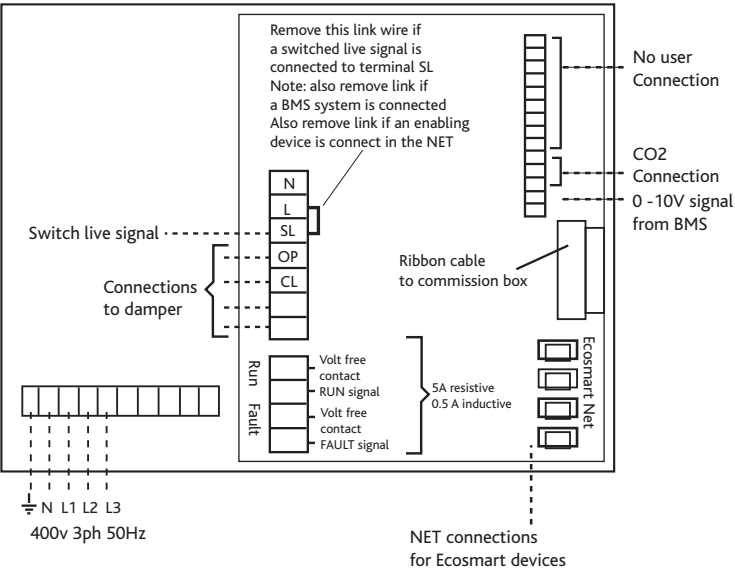

Notes:  
Total length of motor leads should not exceed 50 mtrs.  
If a screened motor cable is used, maximum length should be 30 mtrs.  
Consult our Technical Department if you wish to use longer leads.  
Inverters are configured to suit specific fans and control applications as described on the Customer Order.

3 phase units 4KW and above

3 phase (Ecosmart)

Set up/Commissioning Box

## CONSULTANTS SPECIFICATION

### SYSTEM SPECIFICATION

The ventilation fan Unit shall be configured and arranged as detailed on the drawings and in accordance with the schedule of equipment and shall be of the Airmover type as manufactured by Nuaire. The units shall be manufactured from a highly rigid pentapost framework with 25mm double skinned infill panels. The panels shall contain inert high density infill. Panel materials are heavy gauge Aluzinc corrosion resistant steel. The units shall provide exceptional thermal and acoustic insertion. The very low breakout noise level through the unit casing must not be exceeded. The general construction is to class A leakage.

The fan impeller and motor shall be selected to provide the most energy efficient solution conforming to part L regulations and shall be direct drive with IE2 high efficiency motors to EN60034-30 as standard. The fan impeller shall be a high efficiency backward curved centrifugal design, manufactured in galvanised steel.

The contractor shall allow for all necessary ductwork transformations to and from the fan unit and any associated components in accordance with the manufacturers recommendations, DW 144 and general good practice.

All other components shall be in accordance with the manufacturer's specification.

The unit and ancillaries shall be of the Airmover type as manufactured by Nuaire Ltd.

### CONTROL SPECIFICATION

The fan unit shall be supplied with one of the following control options:-

#### 1. ECOSMART CONTROLS

The compact Ecosmart control system complete with all necessary controls to facilitate the operation of the ventilation system. It shall be come complete with an integral factory fitted Ecosmart PCB which will control the fan unit within the desired design parameters and provide the interface between all external control devices and the unit itself.

The fan unit shall have the following energy saving components integrally mounted, pre-wired to interface with the purpose made PCB, all components pre-wired, configured and factory fitted by the manufacturer: -

- Integral Frequency inverter/speed controller.
- Integral maximum and minimum speed adjustment for commissioning.
- Integral adjustable run on timer.
- Integral BMS interfaces – 0-10V speed adjustment.
- Integral BMS interfaces – Volt free failure and status indication.
- Integral background ventilation switch (trickle switch).
- Multiple IDC sockets for interconnection of sensors or fans using pre-plugged 4-core low voltage cable.

The Ecosmart controls will enable the unit to automatically vary its speed as it receives signals from one of the interconnected sensors. When the signal is received the fan shall either increase speed gradually until the required level is achieved or it will work on a trickle and boost principle. This will then move the fan duty point from trickle/background ventilation rate to the required boost ventilation rate. Both the trickle and boost rates are infinitely variable, easy to adjust and remove the need of a main balancing damper.

#### 2. BMS INTERFACES

The fan unit shall be provided with the following integrated BMS interfaces

- 0 - 10 volt contacts to provide a full BMS interface. This will enable the following functions:-
  - Switch the unit on/off.
  - Switch from low speed to high speed.
  - Full speed control facility.
- 2 No. Volt free contacts to provide fan run and failure indication to provide system status.
- An integrated commissioning/speed control to accurately commission the system, with minimum and maximum speeds easily adjusted via a miniature dial, as recommended in Part L. This will enable the unit to be configured to run between set parameters thus saving motor power and limiting noise.

#### 3. COMMISSIONING SET UP

The fan unit shall be provided with an integrated commissioning/speed control to accurately commission the system, as recommended in Part L, minimum and maximum speeds easily adjusted via miniature dial. The commissioning set up facility directly controls the integrated speed control/frequency inverter.

#### 4. STANDARD CONTROLS

The unit shall be provided with a standard speed control or starter in accordance with the manufacturer's recommendations.

The Fan unit shall have a 3 year warranty.

Ecosmart Airmover shall have a 5 year warranty.

All equipment shall be as manufactured by Nuaire Ltd.

## SQUIF SINGLE FANS

HIGH PRESSURE AND VOLUME CENTRIFUGAL EXTRACT FAN WITH  
MOTOR OUT OF AIRSTREAM, IDEAL FOR KITCHEN  
CANOPY APPLICATIONS.

## BENEFITS

### QUIET OPERATION

One of the quietest solutions for motor unit out of airstream applications. The units shall be suitable for operation in airstream temperatures up to 90°C.

### CLEANER OPERATION

'Out of air stream' motors are ideal for dirty extract and greasy environments. Cleaner motor operation extends motor life.

### IDEAL FOR HIGH RESISTANCES

Backward curved centrifugal impellers provide high pressure development suitable for ducted systems and kitchen canopy with extreme filtration.

### FLEXIBLE SOLUTION

Can be mounted internally, externally, vertically or horizontally.

### CONTROL-ABILITY AS STANDARD

All 3 phase units have the flexibility to be speed controlled utilising Nuaire Ecosmart controls or frequency inverters.

### INSPECTION PANELS

Allow for easy access.

### FAN TO SUIT ALL APPLICATIONS

2-speed motors available for day-to-day extract.

### EASY MAINTENANCE

'Out of air stream' allows for quick and easy access and lower maintenance costs.

### ECOSMART COMPATIBILITY

Can be supplied with Ecosmart controls, providing a simple to install, easy to commission, energy efficient solution. Also facilitates the interconnection of supply AHU.

### WARRANTY

Squif has a 3 year warranty.

Ecosmart Squif has a 5 year warranty.

## SQUIF ANCILLARIES

ES-ISC38.0A	355	525	805	40	710	510

Please note:

- Control selected by ensuring the fan's flc is below stated in the ES-ISC code e.g. fan is 7 amps then controller will be ES-ISC7.7A.
- The mains power supply to the controller must be appropriately sized and installed via a local isolation switch (by others). The isolator must also accommodate the switched live (if used). The mains supply from the ecosmart controller to the fan must be appropriately sized, not exceeding 25 metres and must be a screened power cable, earthed at both ends. A four point glanding plate is formed from the base of the control and in order to main EMC compliance, a Zerohm EMC glanding kit is supplied. An isolator should be located adjacent to the fan.
- Contra and run and standby fans will require two controls, one for each fan for run and standby use ES-ISCT cone control.
- All integrated sensors plug directly into the control panel.
- Refer to product datasheet No. 671432 for further information.

The inverters are microprocessor controlled and use state of the art technology to produce variable output frequency to control the speed of 3 phase squirrel cage motors. In addition to speed control, the inverters offer a number of built in features:

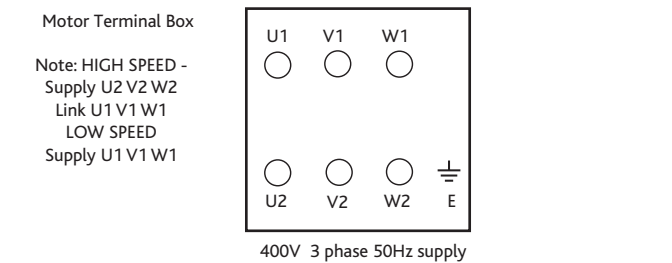

- Soft start to reduce electrical and mechanical load.
- Infinitely variable speed adjustment or pre-set steps.
- Motor over-current detection.
- Alarm signals.
- Proportional control using a 0-10V signal from an external sensor.

All inverters are supplied complete with EMC filter with external filters being used for units above 7.5kW. To ensure the installation complies with EMC requirements, the use of screened power and signal cables are essential. The inverter can be operated over a wide ambient temperature range, 0°C to 50°C and in any clean indoor environments. To ensure safe and trouble-free operations, do not install the inverter near any heat source or in environment containing pollutants, e.g. dust, corrosive gas/vapours or be subjected to water spray or condensation. The inverter can be configured to suit the control regime required for the ventilation system. This can be simple manual control using the front panel of the inverter through to fully automated control via BMS. Please contact our technical support department to discuss your specific needs. All inverters use 400V 3 phase 50Hz power supply.

Please note that the selection should be based on the full load current of the fan NOT the motor rating.

## CONSULTANTS SPECIFICATION

### SYSTEM SPECIFICATION

The ventilation fan Unit shall be configured and arranged as detailed on the drawings and in accordance with the schedule of equipment and shall be of the SQUIF type as manufactured by Nuaire. The units shall be manufactured heavy gauge galvanised steel. The general construction is to class A leakage.

The fan impeller and motor shall be selected to provide the most energy efficient solution conforming to part L regulations and shall be direct drive with IE2 high efficiency motors to EN60034-30 as standard. The fan impeller shall be a high efficiency backward curved centrifugal design, manufactured in galvanised steel and the motor shall be positioned outside the ventilation airflow path.

The contractor shall allow for all necessary ductwork transformations to and from the fan unit and any associated components in accordance with the manufacturers recommendations, DW 144 and general good practice.

The unit and ancillaries shall be of the SQUIF type as manufactured by Nuaire Ltd.

### CONTROL SPECIFICATION

The fan unit shall be supplied with one of the following control options:-

#### 1. ECOSMART CONTROLS

The compact Ecosmart control system complete with all necessary controls to facilitate the operation of the ventilation system. It shall be come complete with factory fitted Ecosmart PCB which will control the fan unit within the desired design parameters and provide the interface between all external control devices and the unit itself.

The fan unit shall have the following energy saving components integrally mounted, pre-wired to interface with the purpose made PCB, all components pre-wired, configured and factory fitted by the manufacturer:-

- Integral Frequency inverter/speed controller.
- Integral maximum and minimum speed adjustment for commissioning.
- Integral adjustable run on timer.
- Integral BMS interfaces – 0-10V speed adjustment.
- Integral BMS interfaces – Volt free failure and status indication.
- Integral background ventilation switch (trickle switch).
- Multiple IDC sockets for interconnection of sensors or fans using pre-plugged 4-core low voltage cable.

### ECOSMART SYSTEM OPERATION

The Ecosmart controls will enable the unit to automatically vary its speed as it receives signals from one of the interconnected sensors. When the signal is received the fan shall either increase speed gradually until the required level is achieved or it will work on a trickle and boost principle. This will then move the fan duty point from trickle/background ventilation rate to the required boost ventilation rate. Both the trickle and boost rates are infinitely variable, easy to adjust and remove the need of a main balancing damper.

#### 2. BMS INTERFACES

The fan unit shall be provided with the following integrated BMS interfaces:

- 0 - 10 volt contacts to provide a full BMS interface. This will enable the following functions:-
  - Switch the unit on/off.
  - Switch from low speed to high speed.
  - Full speed control facility.
- 2 No. Volt free contacts to provide fan run and failure indication to provide system status.
- An integrated commissioning/speed control to accurately commission the system, with minimum and maximum speeds easily adjusted via a miniature dial, as recommended in Part L. This will enable the unit to be configured to run between set parameters thus saving motor power and limiting noise.

#### 3. COMMISSIONING SET UP

The fan unit shall be provided with an integrated commissioning/speed control to accurately commission the system, as recommended in Part L, minimum and maximum speeds easily adjusted via miniature dial. The commissioning set up facility directly controls the integrated speed control/frequency inverter.

The Fan unit shall have a 3 year warranty.  
Ecosmart Squif shall have a 5 year warranty.

All equipment shall be as manufactured by Nuaire Ltd.

TWIN SQUIF FANS

RUN & STANDBY SOLUTION FOR ALL 'MOTOR OUT OF AIRSTREAM' APPLICATIONS.

## BENEFITS

### QUIET AND POWERFUL SOLUTIONS

High performance centrifugal motor/impeller combination providing a low noise solution. The units shall be suitable for operation in airstream temperatures up to 90°C.

### CLEANER

'Out of air stream' motors are ideal for dirty extract and greasy environments. Cleaner motor improves cooling and extends motor life.

### EASY MAINTENANCE

'Out of air stream' motors allow for quick and easy access. Inspection hatches allow the internal parts to be easily checked and cleaned.

### IDEAL FOR HIGH RESISTANCES

High efficiency centrifugal impellers provide high pressure development suitable for ducted systems and kitchen canopy with extreme filtration.

### PREVENTS INTERNAL RECIRCULATION

Backdraft dampers inbuilt.

### FLEXIBLE SOLUTION

Can be mounted internally, externally, vertically or horizontally. Mounting facilities included.

### FAILURE DETECTION

Inverter detects fan failure and Ecosmart control sends signal to 2nd fan.

### CONTROLABILITY AS STANDARD

All 3 phase units have the flexibility to be speed controlled utilising Nuaire Ecosmart controls or frequency inverters.

### ECOSMART AUTO CHANGE OVER AND DUTY SHARE

Ecosmart models have auto change over in the event of fan/motor failure along with integral duty share.

### FAN TO SUIT ALL APPLICATIONS

2-speed motors available for day-to-day extract.

### WARRANTY

Twin Squif has a 3 year warranty.  
Ecosmart Twin Squif (ES) has a 5 year warranty.

Note: Please contact Nuaire for high temperature enquiries.

Note: For information on Gas Interlock please refer to Single Fan section.

## TYPICAL INSTALLATIONS

AV mounts fitted to unit mounting feet (supplied) in horizontal discharge mode.

Unit in vertical discharge mode, mounted on support beam using AV mounts.

WIRING - TWIN SQUIF FANS

Single Phase Fans - Constant Speed

Three phase fans Single speed -  
motors up to 3kW inclusive

Single speed -  
motors 4kW or above

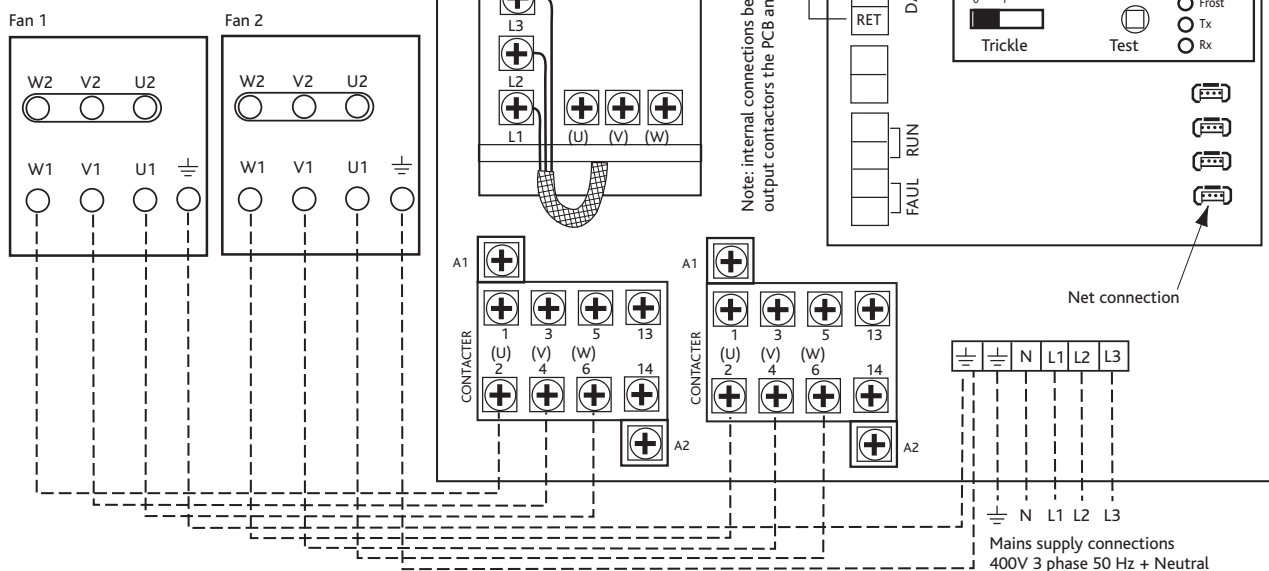

### Three Phase Fans - with Ecosmart (ES-ISCT) controls Motors up to 3kW inclusive

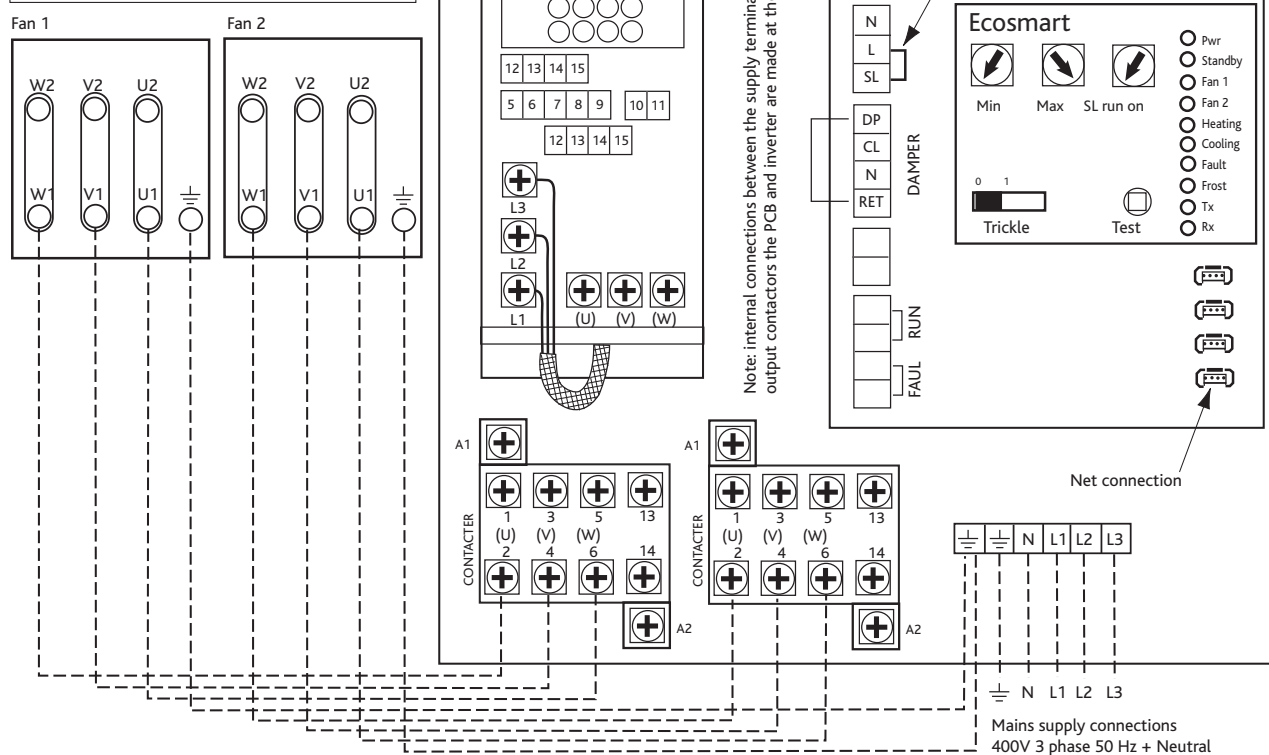

Connections to fans must be via **screened power** cables. Purpose made glands are provided to earth the screening at the control and the fans.

**IMPORTANT:** the screening of the power cable must be continuous. Bridge any breaks (e.g. at local isolator) using braided earthing cable.

### Motors 4kW and above

**Important:** when the unit is operated in an emergency smoke extract mode all controls must be bypassed.

CONSULTANTS SPECIFICATION

SYSTEM SPECIFICATION

The ventilation fan Unit shall be configured and arranged as detailed on the drawings and in accordance with the schedule of equipment and shall be of the SQUIF type as manufactured by Nuaire. The units shall be manufactured heavy gauge Aluzinc corrosion resistant steel.

The general construction is to class A leakage.

FAN SPECIFICATION

The fan impeller and motor shall be selected to provide the most energy efficient solution conforming to part L regulations and shall be direct drive with IE2 high efficiency motors to BS5000 as standard. The fan impeller shall be a high efficiency backward curved centrifugal design, manufactured in galvanised steel and the motor shall be positioned outside the ventilation airflow path.

Run and standby fan assemblies to incorporate fan impeller and motors selected to provide the most energy efficient solution conforming to part L regulations and shall be direct with IE2 high efficiency motors to EN60034-30 as standard, belt or direct drive with EN60034-30 motors fitted with "hall effect" air flow failure monitoring, units suitable for operation in ambient temperatures of 40 degrees C.

The contractor shall allow for all necessary ductwork transformations to and from the fan unit and any associated components in accordance with the manufacturers recommendations, DW 144 and general good practice. The unit and ancillaries shall be of the TSQF type as manufactured by Nuaire Ltd.

CONTROL SPECIFICATION

The fan unit shall be supplied with one of the following control options:-

ECOSMART CONTROLS - OPTION

Ecosmart control system complete with all necessary controls to facilitate the operation of the ventilation system. It shall be come complete with an integral factory fitted Ecosmart PCB which shall control the fan unit within the desired design parameters and provide the interface between all external control devices and the unit itself.

- The fan unit shall have the following energy saving components integrally mounted, pre-wired to interface with the purpose made PCB, all components pre-wired, configured and factory fitted by the manufacturer:
- Auto changeover upon fan failure.
  - Auto duty share every 12 hours of run time.
  - Integral Frequency inverter/speed controller.
  - Integral maximum and minimum speed adjustment for commissioning.
  - Integral adjustable run on timer.
  - Integral BMS interfaces – 0-10V speed adjustment.
  - Integral BMS interfaces – Volt free failure and status indication.
  - Integral background ventilation switch (trickle switch).
  - Multiple IDC sockets for interconnection of sensors or fans using pre-plugged 4-core low voltage cable.

## CONSULTANTS SPECIFICATION

### ECOSMART SYSTEM OPERATION

The Ecosmart controls will enable the unit to automatically vary its speed as it receives signals from one of the interconnected sensors, controls or fans. When the signal is received the fan shall either increase speed gradually until the required level is achieved or it will work on a trickle and boost principle. This will then move the fan duty point from trickle/ background ventilation rate to the required boost ventilation rate. Both the trickle and boost rates are infinitely variable, easy to adjust and remove the need of a main balancing damper.

### BMS INTERFACES – OPTION

The fan unit shall be provided with the following integrated BMS interfaces.

- 0 - 10 volt contacts to provide a full BMS interface. This will enable the following functions:-
  - Switch the unit on/off.
  - Switch from low speed to high speed.
  - Full speed control facility.
- 2 No. Volt free contacts to provide fan run and failure indication to provide system status.
- An integrated commissioning/speed control to accurately commission the system, with minimum and maximum speeds easily adjusted via a miniature dial, as recommended in Part L. This will enable the unit to be configured to run between set parameters thus saving motor power and limiting noise.

### COMMISSIONING SET UP - OPTION

The fan unit shall be provided with an integrated commissioning/speed control to accurately commission the system, as recommended in Part L, minimum and maximum speeds easily adjusted via miniature dial. The commissioning set up facility directly controls the integrated speed control/frequency inverter.

### STANDARD CONTROLS

The unit shall be provided with a standard speed control or starter in accordance with the manufacturers recommendations.

Twin Squif has a 3 year warranty.

Ecosmart Twin Squif has a 5 year warranty.

All equipment shall be as manufactured by Nuaire Ltd.

NOTE: For High Temperature requirements refer to Smoke section.

# GAS INTERLOCK

## safe ventilation for commercial kitchens

Typical control panel.

- All new kitchens must have interlocking on the ventilation system to comply with BS 6173:2001 and GSIUR 27(4).
- Any kitchen built after September 2001 must have interlocking on the ventilation system to comply with BS 6173 and GSIUR 27(4).
- Any existing appliances that are modified or maintained or replaced may also require the ventilation system to be interlocked. (See CORGI Technical Bulletin TB 130).

### What is an interlock?

An interlock is a system that will not allow the gas to be turned on until the ventilation system is operating correctly.

### Why is an interlock required?

An interlock is required to ensure the safety and comfort of the kitchen staff. If the ventilation system is not operating correctly, gases including carbon monoxide and nitrogen dioxide can build up to dangerous levels.

### How does the interlock work?

A sensor must detect an air flow above a certain threshold and then the system will enable the gas isolation valve to open, thereby allowing the gas appliances to be used. If there is no airflow the gas isolation valve CANNOT open. To comply with CORGI regulations, actual airflow "draught" must be measured to determine if the isolation valve should open or not.

### The risks of not complying with the regulations include the following:

- Risks to the health of employees.
- Insurance implications of a claim by an individual or because of a related accident.
- The possibility that a CORGI registered installer may issue an 'At Risk' or 'Immediately Dangerous' certificate which could adversely affect trade.

### Common Systems available:

- Kitchens requiring a basic interlock, where the appliance has gas proving.
- Systems that vary the airflow matched to gas usage with or without gas proving.
- Systems for kitchens with older equipment without flame protection or failure device. This system combines gas proving and interlock features.

### The Nuaire Ecosmart Control system has many advantages in a kitchen application:

- The on board controls allow accurate commissioning.
- The supply and extract fan can be easily connected for balanced supply and extract.
- The Ecosmart control can be connected easily to a number of commercially available Interlocks with automatic speed control feedback eg 0-10V input.
- Nuair twin kitchen Extracts are available.
- The supply fan can be easily shut down when the fire suppression is activated in its 'fire mode' to comply with BS 6173.
