

Advantage 61 – Variable Speed AC drives

The Advantage 61 drive defines ease of use for variable speed drives used in centrifugal pump applications offering the highest level of features, functions and flexibility. This evolutionary design will reduce installation and start-up time while offering reliable operation, simple diagnostics and energy efficiency.

Features & Benefits

Manage and monitor your building

The Advantage 61 drive enables you to:

- Reduce energy costs by reducing motor speed
- Reduce installation costs by eliminating throttling valves or inlet guide vanes typically used to control flow, offering internal connection to major building networks and with quick and simple installation
- Improve up-time by providing superior voltage dip ride through
- Reduce life cycle costs of the installation by eliminating mechanical shock to belts and motors
- Improve indoor air quality and occupant comfort through accurate flow control

Simply Smart!

Leverage ingenuity and intelligence for ease of use

Multipump: Water Distribution

- With the multipump option card, the Advantage 61 drive provides flexibility, user-friendliness and adaptability for the management of multiple pump installations
- The multipump option card contains a variety of pre-programmed function and features to manage multipump installations, such as monitor and fully control the installation by switching and managing the wear and tear between pumps

Municipal water pumps

- Safety and protection of pump: Detection of current threshold
- Limitation of operating time at low speed
- PTC probe management
- Auto-restart function with configurable response
- Underload and overload detection

Hot water and chilled water pumps

- Underload and overload detection with alarm
- Low flow detection
- Sleep/wake function
- Power used, power on time, motor run time

The Advantage 61 drive offers the following values:

- For OEMs, it offers customizable capability that allows the OEM to add value and provide a unique solution
- For System Integrators, it offers flexibility, functionality and wide product range to adapt to a wide variety of job requirements
- For End User installations, it offers quick installation, simple start-up, and on-board diagnostics for uncomplicated maintenance

Features & Benefits

The Leading Edge

This new generation of AC drives demonstrates expertise and know-how with respect to AC drives. Exceptional flexibility, advanced functions and a high level of customization... while always keeping the emphasis on simplicity. Open to many communication networks, the Advantage 61 drive provides ingenious solutions for all your HVAC pump requirements.

Easy to control...

- Graphic screen with customizable display
- Plain text with six languages (English, Chinese, German, Spanish, French and Italian)
- Navigation wheel for easily “surfing” through the menus
- “Simply Start” menu for quick start-up and immediate benefit of the full performance of the Advantage 61 drive
- Function keys for short-cuts, on-line help or configurable for some applications
- Continuous display of the operating parameters of the motor
- Hand/auto function key provides one button bumpless transfer between terminal strip control and control with the keypad, or between communication network control and control with the keypad

A Powerful Fleet

- 1 to 900 HP 3-phase 380 to 480V
- 1 to 125 HP 3-phase 200 to 240V
- Integrated EMC level A filters
- Worldwide offer: UL, CSA, CE, C-Tick, GOST, ULI995 Plenum rated, SEMI-F47

Remarkable performance for pump applications

- Under voltage ride-thru qualified to SEMI-F47 standard
- Catch on the fly restart
- Up to 110% overcurrent
- Energy economizer motor algorithm to maximize energy savings, or select two point or five point Volts/Hz profile
- Three skip frequency bands
- Bump-less transfer from automatic to hand control

Expandable capabilities

The drive is equipped with a wealth of features, application functions, inputs/outputs and communication capabilities.

These can be further extended by:

- Input/Output extension cards
- Communication cards
- A controller inside programmable card
- A Multipump application card

Features & Benefits

Protection at all levels

Of the Motor:

Thermal protection by PTC probe or integrated electronic thermal overload, voltage and current surge limitation

Of the Drive:

Protection in the event of overheating, current limitation using hardware and software, protection against corrosive environments

Of the Installation:

The intelligent design of the Advantage 6I drive power system architecture optimizes the balance between inductance and

capacitance to achieve effective harmonic mitigation with 3% equivalent impedance without requiring additional panel space.

This unique design minimizes dc bus ripple, reduces input currents and lowers harmonic currents. This eliminates the need to oversize power wiring, disconnect means, and short circuit protection devices. This also improves the efficiency of the drive and allows operation at higher ambient temperature than other AC drives.

Of the Environment:

Developed in accordance with the Eco-Design principle.

Materials used have been selected for their minimal impact on the environment and conform to the RoHS directive (Restriction of Hazardous Substances) that prohibits certain levels of materials.

Also, 88% of the parts used for the Advantage 6I drive are recyclable, conforming to the directive WEEE (Waste Electrical & Electronic Equipment).

Flexibility— with its remote mounting alternatives:

- On the door of an enclosure, with an IP54 or IP65 degree of protection
- For multipoint connection to several drives
- Stores four configurations for transfer to other drives

Protection

Multi level password protected, for allowing access to parameters or configurations with complete security

Refine

Select filtering and scaling values to analog inputs and analog outputs

Ergonomic

The navigation button is simple... Use just one finger to freely and quickly “surf” the drop-down menu

Clarity

The display features eight lines of text and graphics. Legibility from 16 ft. away. Available in six languages: English, Chinese, German, French, Spanish and Italian

Simplicity

Use function keys for short-cuts, direct access and on-line help, display of the minimum and maximum values of the parameters.

Customization

Easily customize parameters, display screens and on-line monitoring. You can also create a “user” menu.

Adaptability

Add timing delays to logic inputs, logic outputs and relay outputs

Modify

Configure the active state on the relay and logic outputs.

Message received: All Clear.

The Advantage 6I drive is a professional at communication: its messages are clear, precise, illustrated and intuitive to use.

The **“Simply Start”** menu provides easy access to the most common parameters to reduce start-up time of the Advantage 6I drive.

Configure for your application

- Integrated macro-configurations are designed for a wide variety of applications and uses: pump connection to communication networks and PID regulation. They can easily be customized
- The architecture of the menus, hierarchical parameter system and short-cut functions enable simple and quick programming, even for the most sophisticated functions

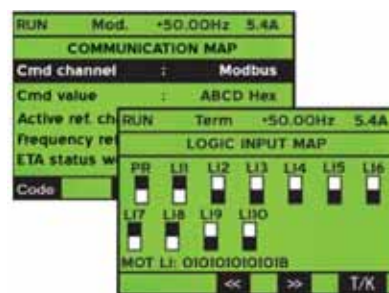

With PowerSuite™ software workshop you stay in control, even from a distance!

For configuring, adjusting and monitoring your Advantage drive... keep an eye on your installations via Bluetooth®...

Oscilloscope function incorporated in the Advantage 6I drive: display multiple channels using PowerSuite™.

More on-board diagnostics:

Ample diagnostics available via the graphic terminal **simplify setting-up** and **maintaining** your equipment.

Display of inputs/outputs, communication, etc.

Service messages all types of information on the display: a telephone number, a specific instruction... All stored on the drive.

The state of the drive is recorded at moment of a fault to assist with diagnostics:

- Elapsed time
- Line voltage
- Motor current
- and more...

Test functions for drive, motor, components, inputs/outputs, etc.

Identity incorporated in the drive simplifies **installed base management**.

Evolutionary Design

Unrivalled basic equipment:

The many functions already integrated in the Advantage 6I drive, allow you to reduce the cost of solutions for your installation. The most economical solution is offered without compromise!

Interface with the typical HVAC and Pump I/O:

- Run command: Input to VFD by remote dry contact from the BAS
- Speed command: Input to VFD from the BAS
- Run status: Output contact from VFD to the BAS
- Speed feedback: Analog output from VFD to the BAS
- Fault output: Form-C contact from VFD to the BAS
- Fire/safety interlock: 24Vdc supplied by VFD, use N.C. contacts

Fans optimized for long life and serviceability

The cooling fans on the Advantage 6I drive are designed to be easily removed for cleaning and servicing. These fans can be removed without removing the drive from the wall or its enclosure and are intelligently cycled on only when required to cool the drive, maximizing the life of the fan.

More than 100 pump functions available

You benefit from:

- Increased flexibility
- High level of customization
- High level of integration

Integrated Modbus® and CANopen Port

With these two standard networks, you achieve:

- Simplified installation
- Savings in panel space
- Direct connection to building network systems

Dialogue

The graphic terminal can be multipoint connected to several drives. The Advantage 6I drive is also available with a 7-segment display for ratings up to and including 20 HP @230Vac and 100 HP @460Vac for the most economical solution.

EMC mastered

Incorporating level A conducted and radiated EMC filters, the Advantage 6I drive simplifies installation and establishes conformity of the machine for CE marking, without additional costs.

“Power Removal” function

Conforming to the machine standard EN 954-1 category 3 and the standard for electrical installations IEC/EN 61508-1 SIL2, and certified by a competent body (INERIS), it enables:

- Easier machine certification
- Elimination of electromechanical relays
- Reduced wiring and installation times
- Space savings in enclosures

For any Mounting requirement:

On a wall

- Simple compact installation use the Type I conduit kit

Reduce enclosure size

- Side by side mounting reduces panel space
- Industry leading 50° C rating
- Externally mounting the heat sink with kit

In severe environments

- Resistance to corrosive environments conforming to class 3C2 of IEC 60721-3-3
- Exposed copper is tinned, circuit boards are conformal coated in critical areas, and plastics are treated to better withstand the corrosive nature of certain oils. (This protection is standard on products 75 HP and higher @ 230 VAC and on 125 HP and higher @ 460 VAC. Add S337 to the end of the catalog number to receive this protection on smaller horsepower products)

Modular configuration

When you require additional inputs or outputs, a communication network connection or desire decentralized equipment control, you can select up to two option cards that snap in without requiring additional panel space

- **Input/output extension cards:**
Logic inputs, open collector outputs, relay, PTC probe input, analog inputs, analog outputs, pulse input
- **Communication cards:**
Connection to the main communication networks available on the market
- **For building networks:** Lonworks, BACnet, Metasys N2, Apogee FLN P1
- **For industrial networks:** Fipio, Ethernet, Modbus Plus, Profibus DP, DeviceNet, Uni-Telway, InterBus
- **Controller Inside programmable card:**
Allows integration of simple programs in the drive for an OEM or integrator to provide unique solutions
- The pump application option card incorporates application functions for managing pumps
 - Single pump or multiple pump management with up to four pump motors with variable speed and fixed speed motors
 - Management of relative operating time
 - Set-up screens minimize start-up
 - Activate only the functions your system requires
 - Instrumentation scaling
 - Real time clock
 - System status and fault messaging

Go Green!

Let the Advantage 6I drive operate your buildings with greater efficiency. Using the Advantage 6I drive on pumps can significantly reduce your energy costs. In many instances, the payback period for using an adjustable frequency drive in place of other flow control methods is less than 18 months. Most HVAC systems are designed to keep the building cool on the hottest days and warm on the coldest days. Therefore, the HVAC system only needs to work at full capacity on the 10 or so hottest days and the 10 or so coldest days of the year. On the other 345 days, the HVAC system may operate at a reduced capacity. This is where a variable air volume system with variable frequency drives (VFDs) can be used to match air flow to actual heating and cooling demands. The VFD can reduce the motor speed when full flow is not required, thereby reducing the power required and the electrical energy used.

An example of an energy saving calculation*

A pump with a 20 horsepower motor operates 10 hours a day for 260 days a year and the energy cost is \$0.10 cents per kilowatt-hour.

Cost of running the motor at full speed:

$$20 \text{ HP} \times 0.746 \text{ kW/HP} \times 2600 \text{ hours} \times \$0.10/\text{kWhr} = \$ 3,879.20$$

Assuming the pump does not need to run at full speed for the full 2600 hours, let's use an example where it runs at full speed 25% of the time, at 80% for 50% of the time, and at 60% for the remaining 25% of the time:

Cost of running with an AC drive controlling the motor:

$$20 \text{ HP} \times (1)^3 \times 0.746 \text{ kW/HP} \times 650 \text{ hours} \times \$0.10/\text{kWhr} = \$ 969.80$$

$$20 \text{ HP} \times (0.8)^3 \times 0.746 \text{ kW/HP} \times 1300 \text{ hours} \times \$0.10/\text{kWhr} = \$ 993.08$$

$$20 \text{ HP} \times (0.6)^3 \times 0.746 \text{ kW/HP} \times 650 \text{ hours} \times \$0.10/\text{kWhr} = \$ 209.48$$

$$\text{Total} = \$ 2,172.36$$

$$\text{Annual savings: } \$3,879.20 - \$2,172.36 = \$1,706.84$$

*Actual results may vary for closed loop pumping and variable air volume systems.

An HVAC system controlled by VFDs will go a long way in helping a new or existing building achieve greater energy efficiency. Not only will HVAC systems run by VFDs save money, but they also will increase the comfort of the building and reduce equipment maintenance costs and downtime. Plus, meeting the requirements of the Energy Policy Act of 2005 and achieving a more "green" system through LEED certification can offer more money-saving opportunities if the building is eligible for state and local government incentives. Ultimately, more efficient HVAC systems create more energy efficient buildings, which in turn conserves energy resources across the U.S. and the world.

Advantage 61 Drives

Eco-Design – thinking of the future:

The new generation of Advantage 61 drives benefits from an Eco-Design approach. The same importance has been given to the “environment” criterion as that for other criteria, such as: performance, quality, ergonomics... and this applies to each stage of the life cycle of the product* (manufacture, distribution, usage and end of life).

Exemplary end of life recovery ...

88% of the parts used for the Advantage 61 drive are recyclable. They enable the recuperation of energy (incineration with energy recuperation) or of material (recycling, composting) conforming to the European directive WEEE (Waste Electrical & Electronic Equipment).

... due to a strict selection and ideal combination of materials

Materials used for the Advantage 61 drive have been selected for their minimal impact on the environment. Conformity to the European directive ROHS (Restriction Of Hazardous Substances) that prohibits the use of materials such as lead, cadmium, mercury and hexavalent chromium.

The green building movement is on!

The Advantage 61 drive can help create green buildings. The U.S. Green Building Council® (USGBC) developed and administered the LEED® (Leadership in Energy and Environmental Design) Green Building Rating System™, to define green buildings. One of the prerequisites of the LEED-NC Energy and Atmosphere component is meeting both the mandatory provisions and prescriptive/performance requirements of ASHRAE 90.1-2004.

This standard sets minimum requirements to promote the principles of effective, energy-conserving design

for buildings and building systems. More specifically, the ASHRAE prescriptive strongly recommends that HVAC systems with total fan power greater than 5 hp have variable air volume fan control and that individual variable air volume fans with motors greater than or equal to 15 hp have variable speed drives.

For government buildings, government regulations such as the Energy Policy Act of 2005 (EPAct) mandate energy monitoring and energy efficiency improvements. LEED certification alone has its benefits. In addition to saving energy costs, it also allows

the building owner to take advantage of state and local government incentives and makes the building project more marketable to tenants who are seeking more energy-efficient/sustainable facilities.

The Advantage 61 drive can help create green buildings by providing gains in energy efficiency, easier commissioning and monitoring of the building, and by its Eco-Design.

Specifications

Electrical Specifications

Input Voltage	200 -15% to 240 +10%, 380 -15% to 480 +10%
Displacement Power Factor	98% through speed range
Input Frequency	50 Hz -5% to 60 Hz +5%
Drive Input Section	Six pulse bridge rectifier
Drive Output Section	Three Phase, IGBT Inverter with Pulse Width Modulated (PWM) output Maximum voltage equal to input voltage
Galvanic Isolation	Galvanic isolation between power and control (inputs, outputs and power supplies)
Frequency Range of Power Converter	0.5 to 500 Hz
Torque/overtorque	110% of nominal motor torque for 60 s, minimum
Current (transient)	110% of controller rated current for 60 s, minimum
Switching Frequency	Selectable from 1 to 16 kHz, 12 kHz nominal rating for 1-60 hp @ 200/240 V, 1-100 hp @ 380/480 V. Selectable: 2.5 to 8 kHz, 2.5 kHz nominal rating for 75-125 hp @ 200/240 V 125-900 hp @ 380/480 V.
Speed Reference Inputs	AI: 0 to +10 V, Impedance = 30 kOhms Used for Speed potentiometer, 1-10 kOhms AI2: Factory setting = 4 to 20mA, software configurable for current, (0-20mA, X-Y) or voltage
Analog Reference Resolution	0.1 for 100 Hz (11 bits)
I/O Sampling Time	2 ms +/- 0.5 ms on analog inputs & outputs, & logic inputs, 7 ms +/- 0.5 ms on relay outputs
Power Removal/Run Permissive Input	24Vdc input, for use to prohibit unintended equipment operation
Efficiency	98% at full load typical
Acceleration and Deceleration Ramps	0.1 to 999.9 seconds (definition in 0.1 s increments)
Skip Frequencies	Three configurable skip frequency/jump frequency bands
Motor Control Profiles	Energy economizer (flux optimization) motor algorithm to maximize energy savings. (Automatically optimizes voltage based on load.) or select from 2 point or 5 point volts/hertz profile or SLFV (sensorless flux vector)
Speed Range	1 to 100, open loop
Motor Protection	Class 10 electronic overload protection or PTC probe
Graphic Display Terminal	Simply Start menu, PID set-up menu, network set-up menu, Logic I/O & Analog I/O mapping and status, Monitoring and self diagnostics with fault messages and status such as; Power on time, elapsed time, motor run time, line voltage, motor current, ready to run, running, motor speed
Compliance	RoHS and WEEE (Waste Electrical & Electronic Equipment compliant)
Codes and Standards	UL, CSA, NOM 117, DNV, CE, C-Tick, GOST, UL 1995 Plenum rated, SEMI-F47 certified for voltage dip ride-through

Environmental Specifications

Temperature	Operation:+14 to + 122° F (-10 to +50° C) Storage:-13 to +158° F (-25 to +70° C)
Humidity	95% with no condensation or dripping water, conforming to IEC 60068-2-3.
Altitude	3,300 ft. (1,000 m) without derating; 3,300- 9850 ft (1,000-3,000 m) derate output current by 1% for each additional 330 ft. (100 m). 6560 ft (2000m) maximum for corner grounded distribution system.
Enclosure Rating	<i>1-60 hp @ 200/240 V, 1-100 hp @ 380/480 V:</i> IP 41 on top IP21 on all other surfaces, Type 1 with optional conduit kit. <i>75-125 hp @ 200/240 V, 125-500 hp @ 380/480 V:</i> IP 41 on top, IP30 sides & front IP00 on bottom, Type 1 w/ optional conduit kit. 600 -900 hp @ 380/480 V. IP 41 on top, IP30 sides and front, IP00 on bottom
Pollution Degree	<i>1-20 hp @ 200/240 V, 1-25 hp @ 380/480 V:</i> Pollution degree 2 per IEC/EN 61800-5-1, Option S337 provides protection per IEC 60721-3-3 Class 3C2 <i>25-60 hp @ 200/240 V, 30-100 hp @ 380/480V:</i> Pollution degree 3 per IEC/EN 61800-5-1, Option S337 provides protection per IEC 60721-3-3 Class 3C2 <i>60-125hp @ 200/240 V, 125-900 hp @ 380/480V:</i> Pollution degree 3 per IEC/EN 61800-5-1 and protection per IEC 60721-3-3 Class 3C2
Vibration Resistance	1-60hp @ 200/240V 1-100 hp @ 380/480 V Conforming to IEC/EN 60068-2-6 1.5mm peak to peak from 3 to 13 Hz, 1gn from 13 to 200 Hz. 75-125 hp @ 200/240V, 125-900 hp @ 380/480V: Conforming to IEC/EN 60068-2-6 1.5mm peak to peak from 3 to 10 Hz, 0.6gn from 10 to 200 Hz.
Shock Resistance	1-60 hp @ 200/240 V, 1-100 hp @ 380/480 V: 15gn for 11ms conforming to IEC/EN 600068-2-27 75-125 hp @ 200/240 V, 125-500 hp @ 380/480 V: 7gn for 11ms conforming to IEC/EN 600068-2-27 600-900 hp @ 380/480 V. 4gn for 11ms conforming to IEC/EN 600068-2-27

Dimensions & Weights

Frame Size	a Width		b Height		c Depth		Weight		b Height with Type 1 Kit	
	mm	ln.	mm	ln.	mm	ln.	kg.	lbs.	mm	ln.

(1) For single-phase 0.75 to 7.5 kW range, select the next rating up
(For Example: 2.2 kW - reference = ATV61HU30M3M).

(2) For single-phase operation, select the next rating up and add a line choke.

(3) Without EMC filter.

(4) With integrated DC bus inductance.

Inputs/outputs on board

Analog input #1: +/- 10Vdc bipolar input, 1 bits + 1 sign resolution, 2ms +/- .5ms sample time

Analog input #2: software selectable for 1-10Vdc or x-y mA
x-y selectable from 0-20mA,

11 bits resolution, 2ms +/- .5ms sample time

Analog output #1: software selectable for 1-10Vdc or x-y mA
x-y selectable from 0-20mA,

10 bits resolution, 2ms +/- .5ms sample time

Relay output #1: one NO (normally open) one NC
(normally closed)

Relay output #2: one NO (normally open)

6 logic inputs 24Vdc, 2ms +/- .5ms sample time
Multiple function assignment possible
Positive logic (source) or Negative logic
(sink) choice LI6 offers PTC probe
assignment

Power Removal input: 1 input for interlocking function
(run permissive)

RJ45 port Modbus or CANopen (selectable)

Heatsink Mounting
Kit VW3A9506

Control Fan Kit

Installation of kit enables the drive to operate in higher ambient temperature. Fan mounts on top of drive and is powered from the drive.
