

Residential Product Catalog

Innovation Has A Name

The story is all in the details. Every water heater that carries the A. O. Smith name has a reputation to live up to, one that we've earned through decades of innovations. As an industry leader, we constantly look for new materials and develop new technologies that can improve energy efficiency. Even if it's as basic as a valve, we want to make sure every component passes the "best test." So, when you choose an A. O. Smith residential water heater, whether it's gas, electric or hybrid you can be confident that you are getting the best—for today and for years to come.

All A. O. Smith residential water heaters meet the Federal Energy Efficiency Standards effective January 20, 2004, according to the National Appliance Energy Conservation Act (NAECA) of 1992 and meet the thermal efficiency and standby loss requirements of the U. S. Department of Energy and current edition of ASHRAE/IESNA 90.1. They also comply with the current edition of ICC Codes and the HUD Standards. Gas models meet American National Standards Institute Standards (ANSI Z21.10.1 - CSA 4.1) governing storage-type water heaters. Electric models are UL listed according to safety specifications outlined in Underwriters Laboratories, Inc. Standards for Safety (UL 174).

CSA® - Low Lead Content

This mark shown on a plumbing product signifies certification to California's legislative AB 1953 and Vermont's legislation Act 193 that limits the lead content in plumbing fixtures that come in contact with drinking water to a maximum of 0.25% lead.

Blue Diamond® Glass Coating

Provides superior corrosion resistance compared to industry-standard glass lining.

ENERGY STAR®

A. O. Smith offers a variety of models that are ENERGY STAR® qualified. Learn more at www.energystar.gov

DynaClean™ Automatic Sediment-Cleaning System

Automatic self-cleaning action greatly reduces sediment accumulation and maximizes hot water output. Conservationist® models are equipped with advanced DynaClean™ II, for maximum sediment-fighting power. ProMax® models feature the standard DynaClean design.

Durable, Tamper-Resistant Brass Drain Valve

Reliable, quality brass drain valve with "screw-slot" head to help prevent valve opening by curious youngsters. Standard on most other residential gas and electric models.

PEX Dip Tubes

A. O. Smith's PEX cross-linked polymer dip tubes are long-lasting with superior resistance to destructive thermal oxidation. Standard on all gas and electric models.

T&P Relief Valve

Every temperature and pressure relief valve is factory-supplied and matched to the heater to help ensure that every A. O. Smith residential water heater is installed properly.

CoreGard™ – Advanced Anode Rod Protection... An Industry Standard!

The anode rod is a highly effective corrosion fighting system which utilizes cathodic action to protect internal tank surfaces from corrosive elements. CoreGard adds a stainless steel core to magnesium or aluminum anodes for even longer life. Standard on Conservationist® and ProMax® models.

Self-Powered Electronic Gas Valve

Series 300 A. O. Smith gas water heaters are equipped with a self-powered electronic gas valve with intelligent control logic. The gas valve has an internal microprocessor that provides enhanced operating parameters and tighter differentials for precise sensing and faster heating response to optimize performance. The self-powered electronic gas valve uses a thermopile to generate the power needed to operate the electronic gas control without requiring an external power source. It also incorporates an LED Status Indicator that monitors system operation and service diagnostics.

Green Choice® Low NOx Burner

Patented "Eco-Friendly" burner design reduces NOx emissions by up to 33% and complies with requirements for low NOx emissions.

Enhanced Ultra-low NOx burner complies with SCAQMD Rule 1121 and other Air Quality Management districts with requirements for NOx emissions of less than 10 ng/j.

Heat Trap Nipples

Help manage standby heat loss. Factory-installed on most models.

Innovative A. O. Smith water heaters are FVIR compliant

A. O. Smith's 30, 40, and 50-gallon standard atmospheric gas and 40 and 50-gallon Power Vent, Direct Vent, Power Direct Vent and Mobile Home (atmospheric vent only) gas water heater models all meet "Flammable Vapor Ignition Resistant" (FVIR) requirements for the ANSI Z21.10.1-CSA 4.1 Standards associated with the accidental ignition of flammable vapors outside the water heater. A. O. Smith's FVIR compliant design provides an advanced level of protection and the industry's most contractor-friendly product.

Residential Water Heater Selection Guide

To select the right A. O. Smith water heater for your home, you need to consider the size of your family and other factors that contribute to your First Hour Rating (FHR) Requirement. The charts below provides suggested A. O. Smith Residential Water Heater selection guidelines for several family sizes.

TANK-TYPE MODELS

- Determine whether your family is Low Demand or High Demand. You should consider your family to be High Demand if...
 - There are more than two full baths in the home.
 - There are (or will be) teenagers living in the home. It's a fact: teenagers use more hot water for showering and washing clothes.
 - You have an oversize whirlpool bath or other large tub. As a rule of thumb, the water heater tank capacity should be 100% of the bathtub capacity (example: 75-gallon tub / 75-gallon water heater).
- Locate your Family Size and determine the First Hour Rating Requirement for your family. If you decide your family is High Demand, consider moving up to the next First Hour Rating level.

- Consult the heater options on the following pages for an A. O. Smith residential water heater with a First Hour Rating that meets your requirements.

FAMILY SIZE	FIRST HOUR RATING REQUIREMENTS
2 People	45 – 55 Gallons
3 People	55 – 65 Gallons
4 People	65 – 75 Gallons
5 People	75 – 85 Gallons
6 People	85 – 100 Gallons
7 or More People	100 or More Gallons

HEAT PUMP MODELS

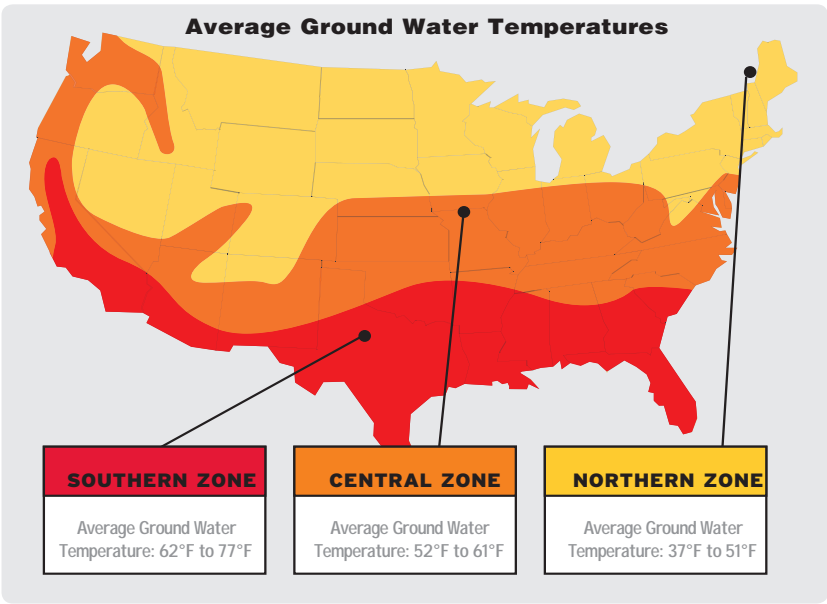

Electric Heat Pump Water Heaters operate at peak-efficiency when sized to allow slower reheating of water. For this reason, define water heating sizing based on “High Demand” criteria when determining First Hour Rating for an electric heat pump water heater.

TANKLESS MODELS

Ground water temperature factor.

The temperature of incoming ground water (cold water inlet temperature) varies greatly throughout the U.S. and also fluctuates with the changing of the seasons. The temperature of water as it enters the water heater will determine the amount of “temperature rise” required to achieve the desired hot water outlet temperature (120°F is recommended).

The best way to measure your incoming ground water temperature is to use a thermometer to measure cold water temperature during the coldest season of the year. To simplify the process, use this map to determine whether your installation location is in the Southern Zone, Central Zone or Northern Zone.

MATCH THE UNIT TO YOUR NEEDS

Number of showers each A. O. Smith unit can handle, depending on ground water temperature

Peak hot water demand.

The next step is to determine how much hot water will be required during the busiest usage period (“peak demand”). Consider all appliances and fixtures that use hot water, including lavatory faucets, kitchen faucets, washing machines, dishwashers, showers and bathtubs. Be sure to determine how many appliances and fixtures will be used at the same time (“peak demand”).

Warmer Climates 70°F Incoming Groundwater Temperature				Cooler Climates 40°F Incoming Groundwater Temperature			
Capacity – Number of Shower Heads							
110	3 Showers			2 Showers			
310	3 Showers			2 Showers			
510	4 Showers			2 Showers			
520	4 Showers			3 Showers			
710	4 Showers			3 Showers			
910	6 Showers			4 Showers			

Assuming the outgoing temperature is 105°F – Assuming a standard showerhead of 2.5 GPM

Remember, these are general recommendations. Your A. O. Smith Water Heater Specialist can review your family’s needs in even greater detail to make sure the model you choose will always provide enough hot water to meet the demand.

NEXT Hybrid® High Efficiency Gas

NEXT Hybrid® is the new milestone in water heating — built for the way people ACTUALLY live and use hot water. The product combines the best features of tankless and conventional technologies to create a new category of water heating.

- *Patented circulation system delivers 90% thermal efficiency, ensuring maximum heat transfer, saving money on operating costs compared to a standard 78% efficient conventional or 84% tankless gas water heater.*
- *189-Gallon First Hour Delivery provides continuous hot water shower after shower when properly sized for your home.*
- *Multiple Lifestyle Modes — Energy-Saver, Vacation and Boost modes allow for simple, one-touch customization based on specific hot water needs.*
- *User-friendly integrated Temperature Controller with LED numeric display allows for precise temperature settings*
- *Easy installation — utilizes a 1/2 inch gas line found in most homes today and the same water and gas connections as conventional tank-type models.*
- *Power vent design*
- *Condensing design allows for PVC, CPVC or ABS pipe for venting (solid core only)*

MODEL NUMBER	FIRST HOUR DELIVERY GALLONS	RECOVERY 90°F RISE GALLONS	BTU INPUT PER HOUR	MANIFOLD PRESSURE			ELECTRICAL CHARACTERISTICS		DIMENSIONS IN INCHES			VENT CONNECTION

*Available in natural gas only

4.3 GPM continuous flow, based on 65° F inlet water temperature and 110° F outlet water temperature.

Vertex™ Power Vent

Family-Friendly Hot Water, Earth-Friendly Efficiency

Through an inspired blend of innovation, efficiency and years of industry expertise, A. O. Smith has created a state-of-the-art product that provides a long-lasting supply of hot water during those times when everyone in your home needs it most. Simply put, Vertex™ delivers.

- Fulfills homeowners' needs during peak demand periods
- 90% Thermal efficiency
- Fully submerged coil heat exchanger maximizes heat transfer
- Advanced electronic gas control
- Easy installation
- Versatile power vent design
- 127-gallon first hour delivery
- 92-gallon recovery @ 90°F rise
- Recirculating side taps for combination systems
- Two heavy-duty commercial-grade anodes for better protection against corrosion
- Intelli-Vent™ gas control for more precise water temperature control

Vertex™ 100 Power Direct Vent

- 96% Thermal efficiency
- Models are eligible for Federal Tax Credit - visit www.hotwater.com for more information
- Vents up to 128 feet using PVC, CPVC or ABS pipe. Canadian installations require ULC S636 approved PVC or CPVC pipe for venting.
- Advanced electronic diagnostics control
 - iCOMM™ compatible and can be monitored from remote locations. Call 1.888.WATER02 for more information.
- 164-gallon first hour delivery
- 129-gallon recovery @ 90°F rise
- Top-fired low-NOx burner complies with ultra-low NOx standards
- Available in Propane (LP) gas

MODEL NUMBER	FIRST HOUR DELIVERY GALLONS	GALLON CAPACITY	BTU INPUT PER HOUR	RECOVERY 90°F RISE GALLONS	DIMENSIONS IN INCHES

Effex® High Efficiency

Exclusive and patented pressurized combustion chamber with an advanced air intake blower delivers superior efficiency. Much like a turbo charger, the blower distributes an optimum air-to-gas mixture pushing exhaust gases through the highly restricted flue baffle. The end result is the most efficient atmospheric gas product on the market with a .70 Energy Factor (EF).

- .70 Energy Factor
- Powered Anode
- LCD User Interface
- Electronic Ignition
- FVIR Compliant Design
- Advanced Technology
- Models are ENERGY STAR® qualified

Series 300/301

Standard Vent Conservationist®

- Highest energy factors – 2 Inch “Environmentally-Friendly” non-CFC foam insulation reduces standby heat loss, includes external traps
- Intelligent control logic
- DynaClean™ II automatic sediment-cleaning system – creates turbulence in tank for maximum protection against lime and sediment buildup
- Blue Diamond® Glass Coating – Provides superior corrosion resistance compared to industry-standard glass lining
- “Flammable Vapor Ignition Resistant” (FVIR) Compliant Design
- Advanced PEX cross-linked polymer dip tube lasts longer than standard polymer dip tubes
- Self-Powered electronic gas valve
- Diagnostics
- Heat trap nipples reduce heat loss through outlet and inlet water connections (3/4" male)
- Our best CoreGard™ magnesium anode rod with stainless steel core provides added protection against tank corrosion
- Piezo ignitor for easy, “no-match” pilot ignition
- “Eco-Friendly” Green Choice® gas burner reduces NOx emissions by 33% compared to standard burners
- CSA Certified and ASME Rated T&P relief valve
- Durable, Tamper-resistant brass drain valve

ProMax® Ultra-Low NOx

- Enhanced Ultra-low NOx burner complies with SCAQMD Rule 1121 and other Air Quality Management Districts with similar requirements for NOx emissions of less than 10ng/lj.
- Intelligent control logic
- Self-Powered electronic gas valve
- FVIR Compliant Design with flame arrestor that provides smooth ignition and safely combusts flammable vapors inside the sealed chamber
- Diagnostics
- DynaClean™ diffuser dip tube helps reduce lime and sediment buildup and PermaGlas® glass coating protects tank from corrosion
- Exclusive CoreGard™ anode rod, made of aluminum with stainless steel core, protects against corrosion
- Enhanced Green Choice® gas burner made of inconel alloy and stainless steel for long life and safety

ProMax® Plus High Recovery

- Highest recoveries and first hour ratings – capacity/input combinations up to 98 gallons/75,100 BTU produce recoveries up to 81 gallons per hour, with deliverable hot water up to 150 gallons in the first hour
- “Flammable Vapor Ignition Resistant” (FVIR) Compliant Design
- DynaClean™ diffuser dip tube – reduces lime and sediment buildup
- Advanced PEX cross-linked polymer dip tube lasts longer than standard polymer dip tubes
- “Eco-Friendly” Green Choice® gas burner reduces NOx emissions by 33% compared to standard burners
- Piezo ignitor on FVIR-compliant models for easy, “no-match” pilot ignition
- CoreGard™ aluminum anode rod with stainless steel core provides added protection against tank corrosion
- CSA Certified and ASME Rated T&P relief valve
- Tamper-resistant brass drain valve
- 6-year warranty on tank and parts
- 8-year extended warranty available on 30, 40 and 50-gallon models

ProMax® Plus High Efficiency

- High efficiency models meet the Federal Energy Efficiency and Standby loss requirements of the U.S. Department of Energy and current edition of ASHRAE/IESNA90.1.
- “Flammable Vapor Ignition Resistant” (FVIR) Compliant Design
- 2 Inch “Environmentally-Friendly non-CFC foam insulation reduces standby heat loss
- Energy-saving external heat traps
- DynaClean™ diffuser dip tube – reduces lime and sediment buildup
- Advanced PEX cross-linked polymer dip tube lasts longer than standard polymer dip tubes
- “Eco-Friendly” Green Choice® gas burner reduces NOx emissions by 33% compared to standard burners
- Piezo ignitor on FVIR-compliant models for easy, “no-match” pilot ignition
- CoreGard™ aluminum anode rod with stainless steel core provides added protection against tank corrosion
- CSA Certified and ASME Rated T&P relief valve
- Durable, Tamper-resistant brass drain valve
- 6-year warranty on tank and parts
- 8 and 10-year extended warranty kits available on all models

Specialty Vent

Specialty vent gas water heaters are an alternative to standard metal vent water heaters. They provide venting flexibility in replacement applications and offer useful choices for location of gas water heaters in new homes. Specialty-vent benefits include:

Flexible Installation – Horizontal venting options allow tremendous flexibility for placement of the water heater in the home. A. O. Smith's ProMax® power vent and power direct vent models offer various venting options and use inexpensive PVC, CPVC or ABS pipe. See specification sheets for venting distances.

Direct-venting for proper combustion – Insufficient indoor ventilation can deprive a gas water heater of enough air for proper operation. The power direct vent and direct vent water heaters have "two-pipe" systems that vent to and draw air from outside the home, eliminating concerns about indoor ventilation.

ProMax® Power Direct Vent

- Two-pipe "closed combustion" system permits combined horizontal and vertical venting and air intake runs up to 45 feet (including one 90° elbow)
- Vents using PVC, CPVC or ABS pipe. Canadian installations require ULC S636 approved PVC or CPVC pipe for venting.
- Quiet modular blower, with 110V/120V electrical system (rating 3 amps or less), with 6-foot cord, standard 3-prong male connector
- Advanced Intelli-Vent™ gas control valve with silicon nitride hot surface ignitor
- "Eco-Friendly" Green Choice® gas burner reduces NOx emissions by 33% compared to standard burners
- FVIR Compliant Design and meets Phase III of the ANSI Z21.10.1 - CSA 4.1 Standards
- Heat trap nipples factory-installed (3/4" male connection)
- CoreGard™ aluminum anode rod with stainless steel core provides added protection against tank corrosion
- CSA Certified and ASME Rated T&P relief valve
- Durable, Tamper-resistant brass drain
- 6-year warranty on tank and parts
- 10-year extended "Stage II" warranty kits available on all models

ProMax® Power Vent

- 40 and 50-gallon residential gas water heaters equipped with FVIR design
- Meets Phase II of the ANSI Z21.10.1 - CSA 4.1 Standards for Flammable Vapor Ignition Resistance (FVIR)
- Vents using PVC, CPVC or ABS pipe. Canadian installations require ULC S636 approved PVC or CPVC pipe for venting
- Equipped with a nearly indestructible silicon nitride hot surface ignitor—no standing pilot
- Exclusive Power Vent blower specifically designed and manufactured by A. O. Smith
- Exclusive A. O. Smith CoreGard™ aluminum anode rod with stainless steel core protects tank against corrosion
- 6-year limited warranty on tank and parts
- 10-year extended warranty kits available on all models (excludes GPS-75)

* 74-gallon model is not FVIR construction

** R8=1", R12=1-1/2" and R16=2" foam capacity

Models with .67 EF are ENERGY STAR® Qualified

ProMax® Direct Vent

- One-pipe/dual-channel system permits horizontal venting and air intake on all models up to 80" (inches) from outside wall
- No electrical power needed
- "Eco-Friendly" Green Choice® gas burner reduces NOx emissions by 33% compared to standard burners
- Heat trap nipples factory-installed (3/4" male connection)
- Piezo ignitor
- CoreGard™ magnesium anode rod with stainless steel core provides added protection against tank corrosion
- CSA Certified and ASME Rated T&P relief valve
- Durable, Tamper-resistant brass drain valve
- 6-year warranty on tank and parts

All ProMax SL water heaters are equipped with side-mounted recirculating taps.

ProMax® Side Loop (SL)

For recirculating hot water loop systems

A. O. Smith ProMax SL gas water heaters are designed with side-mounted recirculating taps for installations with combination space heating/water heating applications (such as with air handlers) or any system requiring a recirculating hot water loop.

ProMax SL water heaters are available in Standard Vent, Direct Vent, Power Vent and Power Direct Vent models. All models include the following features:

- Tamper-resistant brass drain valve
- High-temperature DynaClean™ diffuser dip tube reduces lime and sediment buildup
- "Eco-Friendly" Green Choice® gas burner reduces NOx emissions by 33% compared to standard burners
- CSA Certified and ASME Rated T&P relief valve
- Optional circulating loop connection assemblies available
- 6-year warranty on tank and parts

Standard Vent Side Loop (SL)

- Standard models (equipped with advanced DynaClean™ automatic sediment cleaning system)
- FVIR compliant on 40, 50 and 65-gallon models
- Dual anode rods for superior protection against corrosion
- Piezo ignitor on FVIR compliant models for easy "no-match" pilot ignition

Tankless Innovation

A. O. Smith's complete line of tankless gas water heaters

Trust the innovation leader to give you more choices in tankless water heating. The comprehensive line of A. O. Smith tankless water heaters supplies endless hot water (when properly sized for your application) at preset temperatures. All residential models are ENERGY STAR® qualified and feature improved flow rates. Condensing models provide the highest energy efficiency, saving money in both residential and commercial applications. All commercial models feature HRS35 commercial-grade copper heat exchangers, providing extra protection against corrosion.

Innovative Technology

- Condensing models feature 316L stainless steel secondary heat exchanger, providing additional protection against corrosion
- Increased flow rates provide continuous hot water (up to 14.5 GPM)
- Improved scale-reduction software
- Whole house water heating solution
- All models include internal freeze protection and multiple safety features
- Direct vent conversion kits available for indoor installations
- Applicable for residential hydronic heating applications

Excellent Performance

- Complete range of models from 140,000 to 380,000 BTU to cover every application
- Residential warranty: 12-year limited warranty on heat exchanger/5-year parts
- Commercial warranty: 5-year limited warranty on heat exchanger/5-year parts
- Complies with lead plumbing law

Energy Efficiency

- All residential models are ENERGY STAR® qualified
- Condensing models provide the highest energy efficiency with 0.91 EF (Energy Factor)
- Eligible for Federal Tax Credit – visit www.hotwater.com for more information

Residential Hybrid Electric

Voltex® Hybrid Electric Heat Pump Water Heaters

Voltex® Hybrid water heaters are the most versatile, energy-efficient option for the consumer who is looking to go green and save some green. Voltex can provide the same amount of hot water as a conventional electric water heater at less than half the cost.

- **ENERGY STAR® Qualified**
- **Eligible for Federal Tax Credit (State and Local Utility Rebates May Apply as Well)**
- **Energy Saving Heat Pump Technology Can Reduce Operating Costs by More Than 50%**
- **Increased Storage Allows Heat Pump to Operate More Frequently, Boosting Savings**
- **Environmentally-Friendly R134a Refrigerant**
- **Multiple Operating Modes to Optimize Savings & Performance**
- **User-Friendly LCD Touch Pad Control with plain English text and intuitive status icons provides easy interaction**
- **Water Temperature Set Point Range 95°F to 150°F (35°C to 66°C), with Child Resistant Safety Lock**
- **Advanced Diagnostics convey error messages in plain English – Stores Last Four Error Messages**
- **Maintenance Free Powered Anode protects the tank from corrosion in any water conditions**
- **Easy-to-Remove, Washable Air Filter**
- **Long Lasting Incoloy Backup Heating Elements**
- **2 Inch “Environmentally-Friendly” Non-CFC Foam Insulation reduces standby heat loss**
- **10-Year Limited Tank and Parts Warranty**

Conservationist®

The top-of-the-line Conservationist electric water heater is fully loaded with all A. O. Smith's leading innovations. For consumers looking for maximum energy savings and excellent output, the Conservationist is the model of choice.

- *Highest Energy Factors make the Conservationist qualified for utility rebates*
- *Our most efficient electric models, for maximum savings on operating costs with 3 Inch "Environmentally-Friendly" Non-CFC foam insulation to reduce standby heat loss*
- *Factory-installed heat trap nipples (3/4" male connection) for installation ease and to reduce standby heat loss*
- *Blue Diamond® Glass Coating – Provides superior corrosion resistance compared to industry-standard glass lining*
- *4500W Phoenix™ low-watt density Incoloy steel upper and lower heating elements – designed to operate more efficiently and last 2-3 times longer than standard copper elements*
- *Durable, Tamper-resistant brass drain valve*
- *CSA Certified and ASME rated T&P relief valve*
- *Extra warranty protection – 10 years on the tank and parts*

ProMax® Plus High Efficiency

ProMax Plus High Efficiency is a great combination of value and savings, meeting energy efficiency requirements for most electric utility rebate programs.

- Meets energy efficiency requirements for most electric utility programs, ENERGY STAR® Home Program recommendations and meets the standby loss requirements of the U.S. Department of Energy and current edition of ASHRAE/IESNA 90.1
- 2-1/2 Inch "Environmentally-Friendly" Non-CFC foam insulation reduces standby heat loss
- Energy-saving external heat traps (3/4" male connection) installed
- DynaClean™ diffuser dip tube reduces lime and sediment buildup, maximizes tank life
- Durable, tamper-resistant brass drain valve
- CSA Certified and ASME rated T&P relief valve
- 6-year warranty on tank and parts, 10-year tank warranty available on all models
- 8-year and 10-year extended warranties available on 40 through 80-gallon models

Point-of-Use

ProMax® Specialty Electric

To make the most out of limited space or deliver small amounts of hot water for small-demand applications, A. O. Smith offers ProMax Specialty Electric options. 6-year tank and parts warranty on all models.

- **Compact Designs**—Feature side-mounted plumbing and electrical connections with factory-installed nipples as well as convenient plugged top plumbing connection for versatility. Available in 6 through 20-gallon capacity with a single heating element.
- **Lowboy Side Connect**—Compact design, with side-mounted plumbing and electrical connections, for installation under a counter or in other tight spaces. Single heating element.
- **Point-of-Use**—Designed for low-demand, point-of-use applications such as office lavatories or buildings with remote restrooms. 2 1/2-gallon capacity, equipped with single heating element and 110V/120V cord set with 3-prong plug. Includes integrated wall-mounted bracket for easy installation and top-plumbed for confined installations.

†Depth dimension is floor to T&P Valve and floor to hot water outlet. Dimension from floor to cold water inlet on all lowboy side-connect models is 3-1/2".

Point-of-Use models have 1/2" inlet and outlet connections.

* Height is to top of case. Add 2-3/4" to allow for T&P valve.

Mobile Home Electric Models

These electric water heaters are designed for modular housing applications. Available in 3 sizes to fit various applications; 30-gallon lowboy for limited height spaces, a 30-gallon tall model to fit narrow spaces and a 40-gallon regular model for unrestricted space when additional capacity is required.

- *Dual Heating Elements – Screw-in, direct immersion, 3500 watt, 240 volt heating elements for maximum efficiency*
- *2 Inch “Environmentally-Friendly” Non-CFC Foam Insulation – Reduces Standby heat loss*
- *CSA Certified and ASME Rated T&P Relief Valve – Conveniently located on the side of the tank to facilitate piping to a drain or external to the building*
- *Side Water Connections – For ease of installation in Mobile Home Applications*
- *Anode Rod – Top-mounted, heavy-duty anode for added tank protection, extending the life of the tank*
- *Built-In Electric Junction Box – Top-located, convenient junction box, ready for 1/2” or 3/4” conduit*
- *Thermostat/High Limit Control – Combination control allows adjustment of water temperature while providing overheat protection*
- *Durable, Brass Tamper-Resistant Drain Valve*
- *Code Approvals – Listed to UL 174. Meets HUD mobile home installation and BOCA Codes. Meets the standby loss requirements of the U. S. Department of Energy and current edition of ASHRAE/IESNA 90.1 and the Federal Energy Efficiency Standards effective January 20, 2004, according to the National Appliance Energy Conservation Act (NAECA) of 1992. All models are certified at 300 PSI test pressure and 150 PSI working pressure.*

MHEW2-40R-035D	100	40	16.1	50	0.92	3500/3500	20	47-1/4	40-3/4

Dimensions and specifications subject to change without notice in accordance with our policy of continuous product improvement. Dimensions on all charts shown in inches.

All models are wired for non-simultaneous element operation. 3/4” water connections. Available with side T&P only.

Pump & Expansion Tanks

Pump Tanks

- Multiple head construction adds structural strength and more capacity within the same diameters
- Interior epoxy coating is permanently bonded to the tank shell for ultimate protection on the water side of the tank
- Durable butyl diaphragm ensures long life
- Positive lock retention system controls compression in the diaphragm connection, eliminating air loss or water leaks in tank
- Electrostatically applied powder-coated exterior for maximum sunlight (UV) resistance with zinc phosphate undercoat for highest corrosion resistance
- Corrosion-resistant metal air valve
- Welded steel base
- 5-year limited warranty

MODEL NUMBER	VOL. (GALL.)	CONN NPT SIZE	OVERALL HEIGHT (IN.)	TO CENTER OF WATER INLET (IN.)	DIAMETER (IN.)	WEIGHT (LBS.)
